Neurological Study Of Newborn Infants Clinics In Developmental Medicine:

A Neurological Study of Newborn Infants David J. Beintema, 2013-10-22 A Neurological Study of Newborn Infants considers the consistencies and inconsistencies of neonatal neurological signs. The possibility of a relationship between pre and perinatal complications of pregnancy and later cerebral dysfunction has led to an increasing interest in the early detection of these defects in the newborn infant. This book is divided into nine chapters and begins with a presentation of standardized procedures to obtain reliable information from the neurological examination. The next chapters deal with the developmental course of neurological signs during the first days of life. The final chapters discuss the potential effects of obstetrical and postnatal conditions on the developmental course and the consistency of neurological signs throughout the neonatal period. This book is an invaluable source for developmental biologists, neurologists, pediatricians and obstetricians.

The Neurological Assessment of the Preterm and Full-term Newborn Infant Lilly M. S. Dubowitz, Victor Dubowitz, Eugenio Mercuri, 1999-01-26 This is the second edition of the manual describing this popular and practical tool for the clinical neurological examination of the newborn. In addition to a number of developments on the original scheme in the light of clinical and research experience, the new manual also facilitates the recording and performance of the examination by providing clear information on its administration aided by illustrative diagrams. New sections include a simplified version of the examination suited to inexperienced staff applicable both for screening and for use in developing countries, a revised proforma that may be used for the follow up of infants beyond the neonatal period and a new section describing clinical patterns in newborns with brain lesions and their correlation with imaging and neurological findings. Scoring tables are included in the back of the book. **The Neurological Examination of the Full-Term Newborn Infant** Heinz F. R. Prechtl, 1991

The High-risk Neonate Jane K. Sweeney, 1986 This groundbreaking volume addresses the major challenges facing practitioners of neonatal treatment, the new and exciting subspecialty of pediatric therapy practice. Experts fully explore how professionals can provide safe and therapeutic intervention for high risk neonates and their parents. They provide a readable, comprehensive overview of neonatal neuropathology, neurologic and behavioral assessment and clinical management strategies for newborns at risk for neurological dysfunction. The High Risk Neonate is a unique volume that explores the medical complications of the prematurely born neonate and presents outcome data from early physical therapy intervention with infants. **Continuity of Neural Functions from Prenatal to Postnatal Life** Heinz F. R. Prechtl, 1984

Is the human neonate indeed physiological premature as has been frequently stated? How does human neural development compare with that of other primate species? Is early human development a gradual unfolding of neural mechanisms from prenatal to postnatal life, or does it show rapid transformations at particular ages? The aim of this book is to answer these and similar questions about the functional repertoire of the human fetus, neonate and young infant. Two main theoretical concepts are considered: first, the relationship between neural maturation and the duration of pregnancy, and second, the existence of

ontogenetic adaptations Surveys and findings relevant to these concepts are provided by experts from various disciplines involved in research on fetal and preterm development and on the first three months of postnatal life This book differs from many others summarizing descriptive knowledge of the field by emphasizing new theoretical concepts of early functional development Recent ultrasound studies of the fetus have contributed greatly to this new approach which has clear implications for the assessment and care of young infants This thought provoking book will be of interest to developmental neurologists pediatricians and obstetricians as well as to developmental psychologists and physical anthropologists

Motor Development in Early and Later Childhood Alex Fedde Kalverboer,Brian Hopkins,Reint Geuze,1993-02-25 Motor development is an integral part of the developmental process Understanding the organization of the sensory motor system and its adaptations in response to environmental factors is a vital part of understanding individual development as a whole This volume describes and discusses human motor development using longitudinal study methods and from an interdisciplinary perspective
