Ocean Resources An Introduction To Economic Oceanography:

Ocean Resources Roger Henri Charlier, Bernard L. Gordon, 1978 *Elements of Dynamic Oceanography* D.

Tolmazin, 2012-12-06 The ocean evokes the most romantic images of nature It is the eternally hostile element that has taken a heavy toll for every act of discovery sometimes in human lives No wonder there has always been a romantic aura about those who take to the sea be they pirates fishermen sailors the ocean itself have or even oceanographers Their exploits and provided ample food for thought and poetic inspiration Clearly man kind owes much to the ocean for the progress of civilization There is more to wresting the ocean s secrets from its depths than simply the excitement of struggling with the elements It is the thrill of ideas of discoveries made by scientific analysis of oceanic phenomena There have been quite a few renowned oceanographers who have never set foot aboard ship All they did was to use the general laws of fluid behavior and mathematical formulas as tools to study the ocean and to predict events Amazing armchair discoveries of currents and deep sea flows subsequently confirmed by observations at sea are fascinating What a scientist feels when uncovering the true behavior of oceanic phenomena in abstract columns of numbers in long and cumbersome or sometimes intriguingly simple mathematical relations is exhilarating My objective has been to bring this delightful esthetic pleasure within everyone s reach the outcome is this book It was about twelve years ago when I first recognized the inherent harmony of the theory of currents I was probably prompted by H **Ocean Resources** D.A. Arduş, M.A. Champ, 2012-12-06 Today western nations consume annually only a small percentage of their resources from the sea despite the proclamation of Exclusive Economic Zones EEZ by many In contrast most Pacific Basin Countries obtain more than a quarter of their annual needs from the ocean Determination of greater rewards from the development of marine resources is markedly inhibited by the limited technical abilities available to locate and assess them Knowledge of Exclusive Economic Zone resources is schematic and generalised and a detailed understanding of the geology and processes relating to the economic use of the seafloor is both fragmentary and very basic Technology for mapping the mineral resources of continental shelves and ocean areas except in active offshore hydrocarbon provinces has been largely developed in pursuit of scientific objectives and competence to rapidly appraise economic potential is limited Similarly the capability to characterise and evaluate the other resources of the seas is rudimentary The development of ocean resources will become increasingly urgent as the growth of the world population and the depletion of land reserves combine to enhance demand Also increasing environmental constraints will limit the availability of traditional land based resources nevertheless new offshore development must proceed in a manner whereby the marine environment is not plundered but protected and conserved The challenge to develop ocean resources with responsible environmental stewardship will require greater leadership than the development of the technologies of exploitation Selected Papers Presented at the Workshop on Economic Strengthening of Fisheries Industries in Small Island Developing States in the South Pacific, Apia, Samoa, 14-18, September 1998 Food and Agriculture Organization of the
