Advances in Mechanical Systems Dynamics Alberto Doria,Giovanni Boschetti,Matteo Massaro,2020-02-13 Modern dynamics was established many centuries ago by Galileo and Newton before the beginning of the industrial era Presently we are in the presence of the fourth industrial revolution and mechanical systems are increasingly being integrated with electronic electrical and fluidic systems This trend is present not only in the industrial environment which will soon be characterized by the cyber physical systems of industry 4 0 but also in other environments like mobility health and bio engineering food and natural resources safety and sustainable living In this context purely mechanical systems with quasi static behavior will become less common and the state of the art will soon be represented by integrated mechanical systems which need accurate dynamic models to predict their behavior Therefore mechanical system dynamics are going to play an increasingly central role Significant research efforts are needed to improve the identification of the mechanical properties of systems in order to develop models that take non linearity into account and to develop efficient simulation tools This Special Issue aims at disseminating the latest research achievements

findings and ideas in mechanical systems dynamics with particular emphasis on applications that are strongly integrated with other systems and require a multi physical approach
