Plasmodesmata Structure Function Role In Cell Communication:

Plasmodesmata Aart J.E. van Bel, Wilhelmus J.P. van Kesteren, 2012-12-06 Plasmodesmata are minuscule plasma corridors between plant cells which are of paramount importance for transport communication and signalling between cells These nano channels are responsible for the integrated action of cells within tissues and for the subdivision of the plant body into working symplast units This book updates the wealth of new information in this rapidly expanding field Reputed workers in the field discuss major techniques in plasmodesmatal research and describe recent discoveries on the ultrastructure the functioning and the role of plasmodesmata in intracellular transport and communication in cell differentiation plant development and virus translocation *Intercellular Communication in Plants* Andrew J. Fleming, 2005 Intercellular Communication in Plants provides an overview of intercellular signaling systems capitalizing on the results of contemporary molecular biology Many biological phenomena are controlled by intercellular signaling systems initiated by messenger molecules For example intercellular communication channels are thought to be associated with a plant's growth and dormancy development an important adaptive strategy for the survival and regrowth of temperate perennials This volume is directed at researchers and professionals in plant biochemistry physiology cell biology and molecular biology in both the academic and industrial sectors Actin: A Dynamic Framework for Multiple Plant Cell Functions Christopher J. Staiger, František Baluška, D. Volkmann, P. Barlow, 2013-04-17 Actin is an extremely abundant protein that comprises a dynamic polymeric network present in all eukaryotic cells known as the actin cytoskeleton The structure and function of the actin cytoskeleton which is modulated by a plethora of actin binding proteins performs a diverse range of cellular roles Well documented functions for actin include providing the molecular tracks for cytoplasmic streaming and organelle movements formation of tethers that guide the cell plate to the division site during cytokinesis creation of honeycomb like arrays that enmesh and immobilize plastids in unique subcellular patterns supporting the vesicle traffic and cytoplasmic organization essential for the directional secretory mechanism that underpins tip growth of certain cells and coordinating the elaborate cytoplasmic responses to extra and intracellular signals The previous two decades have witnessed an immense accumulation of data relating to the cellular biochemical and molecular aspects of all these fundamental cellular processes This prompted the editors to put together a diverse collection of topics contributed by established international experts related to the plant actin cytoskeleton Because the actin cytoskeleton impinges on a multitude of processes critical for plant growth and development as well as for responses to the environment the book will be invaluable to any researcher from the advanced undergraduate to the senior investigator who is interested in these areas of plant cell biology Cell-Cell Channels František Baluška, Dieter Volkmann, Peter W. Barlow, 2007-08-10 The biological sciences are dominated by the idea that cells are the functionally autonomous physically separated discrete units of life This concept was propounded in the 19th century by discoveries of the cellular structuring of both plants and animals Moreover the apparent autonomy of unicellular

eukaryotes as well as the cellular basis of the mammalian brain an organ whose anatomy for a long while defied attempts to validate the idea of the cellular nature of its neurons seemed to provide the final conclusive evidence for the completeness of cell theory a theory which has persisted in an almost dogmatic form up to the present day However it is very obvious that there are numerous observations which indicate that it is not the cells which serve as the basic units of biological life but that this property falls to some other subcellular assemblage To deal with this intricate problem concerning the fundamental unit of living matter we proposed the so called Cell Body concept which in fact develops an exceedingly original idea proposed by Julius Sachs at the end of the 19th century In the case of eukaryotic cells DNA enriched nuclei are intimately associated with a microtubular cytoskeleton In this configuration as a Cell Body these two items comprise the fundamental functional and structural unit of eukaryotic living matter The Cell Body seems to be inherent to all cells in all organisms *Annual Plant Reviews, Plasmodesmata* Karl J. Oparka, 2008-04-15 Since their discovery over 100 years ago plasmodesmata have been the focus of intense investigation Plasmodesmata are unique to plants and form an intercellular continuum for the transport of solutes signals and ribonucleoprotein complexes It is now clear that plasmodesmata formation and regulation are central to a diverse range of plant functions that include developmental programming host pathogen interactions and systemic RNA signaling This book provides a state of the art overview of the diverse forms and functions of plasmodesmata It covers the structure and evolution of plasmodesmata their role in plant development and solute transport and their central function in systemic signaling via the phloem It includes critical evaluations of current methods used to study intercellular transport via plasmodesmata The volume is directed at researchers and professionals in plant cell biology plant molecular biology plant physiology and plant pathology *Annual Plant Reviews, Intercellular Communication in Plants* Andrew J. Fleming, 2009-02-12 Annual Plant Reviews Volume 16 Intercellular communication in plants plays a vital role in the coordination of processes leading to the formation of a functional organism The signalling systems must function at a local level to coordinate events of cellular differentiation over long distances to coordinate developmental and physiological responses in different parts of the plant and they must even operate between separate individuals for example to control fertilization as part of the evolutionary strategy of a particular species To cope with the diverse requirements for intercellular signalling plants have evolved a spectrum of molecular mechanisms and significant progress has been made over the last few years in our understanding of these processes This volume provides an overview of our current understanding of intercellular communication in plants with an emphasis on those research areas showing significant recent progress and promise It is directed at researchers and professionals in plant biochemistry physiology cell biology and molecular biology *The Plant Endoplasmic Reticulum* David G. Robinson, 2006-08-15 The endoplasmic reticulum ER called the mother of all membranes is spotlighted in this timely new book The work presented here is especially exciting since GFP technology has provided new ways of looking at the dynamics of the ER and its relationship to other organelles particularly the Golgi apparatus and

peroxisomes This book provides in depth knowledge of the ER and the diverse roles it plays *Symplasmic Transport in Vascular Plants* Katarzyna Sokołowska, Paweł Sowiński, 2013-07-25 Concentrates on symplasmic transport of small molecules although the cell to cell transport of macromolecules will also be discussed This book characterizes the efficiency of symplasmic transport mechanisms of molecule passage via plasmodesmata and the external and internal factors that regulate plasmodesmatal conductivity In this context the book focused on the role of symplasmic domains in plant development as well as the influence of environmental stresses on the plasmodesmata Besides cell to cell symplasmic transport the significance of long distance symplasmic transport of solutes in phloem elements is also reviewed *Symplasmic Transport in Vascular Plants* presents the mechanism of phloem transport the processes of symplasmic loading and unloading as well as the role of pre and post phloem transport with special attention paid to symplasmic transport in wood Finally the relevance of the spread of both macromolecules and viruses via plasmodesmata is presented **International Review of Cytology** Kwang W. Jeon, 2004-08-28 *International Review of Cytology* presents current advances and comprehensive reviews in cell biology both plant and animal Articles address structure and control of gene expression nucleocytoplasmic interactions control of cell development and differentiation and cell transformation and growth Authored by some of the foremost scientists in the field each volume provides up to date information and directions for future research Plant Electrophysiology Alexander G. Volkov, 2012-05-03 This book written by the leading experts in the field of plant electrophysiology provides a comprehensive and up to date overview of the current state of knowledge on electrical signaling and responses in plant physiology It covers a significant interdisciplinary area for a broad range of researchers emphasizing the physical chemical biological and technological aspects of plant electrophysiology while also demonstrating the role of electrochemical processes and ion channels in plant life cycles Separate chapters describe the electrophysiology of the Venus flytrap the Telegraph plant *Mimosa pudica* and other interesting plant species Subsequent sections focus on mechanisms of plant movement the role of ion channels morphing structures and the effects of electrical signal transduction on photosynthesis and respiration Further topics include the electrophysiology of plant insect interactions how plants sense different environmental stresses and stimuli and how phytoactuators respond to them All chapters analyze the generation and transmission of electrical signals in plants
