Riemann Problem For The Transportation Equations In Gas Dynamics:

The Riemann Problem for the Transportation Equations in Gas Dynamics Wancheng Sheng, Tong Zhang, 1999 In this volume the one dimensional and two dimensional Riemann problems for the transportation equations in gas dynamics are solved constructively In either the 1 D or 2 D case there are only two kinds of solutions one involves Dirac delta waves and the other involves vacuums which has been merely discussed so far The generalized Rankine Hugoniot and entropy conditions for Dirac delta waves are clarified with viscous vanishing method All of the existence uniqueness and stability for viscous perturbations are proved analytically

The Two-Dimensional Riemann Problem in Gas Dynamics Jiequan Li, Tong. Zhang, Shuli Yang, 2022-02-13 The Riemann problem is the most fundamental problem in the entire field of non linear hyperbolic conservation laws Since first posed and solved in 1860 great progress has been achieved in the one dimensional case However the two dimensional case is substantially different Although research interest in it has lasted more than a century it has yielded almost no analytical demonstration It remains a great challenge for mathematicians This volume presents work on the two dimensional Riemann problem carried out over the last 20 years by a Chinese group The authors explore four models scalar conservation laws compressible Euler equations zero pressure gas dynamics and pressure gradient equations They use the method of generalized characteristic analysis plus numerical experiments to demonstrate the elementary field interaction patterns of shocks rarefaction waves and slip lines They also discover a most interesting feature for zero pressure gas dynamics a new kind of elementary wave appearing in the interaction of slip lines a weighted Dirac delta shock of the density function The Two Dimensional Riemann Problem in Gas Dynamics establishes the rigorous mathematical theory of delta shocks and Mach reflection like patterns for zero pressure gas dynamics clarifies the boundaries of interaction of elementary waves demonstrates the interesting spatial interaction of slip lines and proposes a series of open problems With applications ranging from engineering to astrophysics and as the first book to examine the two dimensional Riemann problem this volume will prove fascinating to mathematicians and hold great interest for physicists and engineers

Handbook of Differential Equations: Evolutionary Equations C.M. Dafermos, Eduard Feireisl, 2005-10-05 The aim of this Handbook is to acquaint the reader with the current status of the theory of evolutionary partial differential equations and with some of its applications Evolutionary partial differential equations made their first appearance in the 18th century in the endeavor to understand the motion of fluids and other

continuous media The active research effort over the span of two centuries combined with the wide variety of physical phenomena that had to be explained has resulted in an enormous body of literature Any attempt to produce a comprehensive survey would be futile The aim here is to collect review articles written by leading experts which will highlight the present and expected future directions of development of the field The emphasis will be on nonlinear equations which pose the most challenging problems today Volume I of this Handbook does focus on the abstract theory of evolutionary equations Volume 2 considers more concrete problems relating to specific applications Together they provide a panorama of this amazingly complex and rapidly developing branch of mathematics

Study of the Critical Points at Infinity Arising from the Failure of the Palais-Smale Condition for n-Body Type Problems Hasna Riahi,1999 In this work the author examines the following When the Hamiltonian system $m \ddot{q} + \nabla V(q) = 0$ with periodicity condition $q(t) = q(t+T)$ for all t in $\mathbb{R}$ where $q \in \mathbb{R}^n$ and $V = \sum_{i,j=1}^n V_{ij}(q_i, q_j)$ with $V_{ij}(t, x_i)$ periodic in t and singular in x_i at $x_i = 0$ is posed as a variational problem the corresponding functional does not satisfy the Palais Smale condition and this leads to the notion of critical points at infinity This volume is a study of these critical points at infinity and of the topology of their stable and unstable manifolds The potential considered here satisfies the strong force hypothesis which eliminates collision orbits The details are given for 4 body type problems then generalized to n body type problems

Generalizations of the Perron-Frobenius Theorem for Nonlinear Maps Roger D. Nussbaum,Sjoerd M. Verduyn Lunel,1999 The classical Frobenius Perron Theorem establishes the existence of periodic points of certain linear maps in $\mathbb{R}^n$ The authors present generalizations of this theorem to nonlinear

Invariant Measures for Unitary Groups Associated to Kac-Moody Lie Algebras Doug Pickrell,2000 The main purpose of this paper is to prove the existence and in some cases the uniqueness of unitarily invariant measures on formal completions of groups associated to affine Kac Moody algebras and associated homogeneous spaces The basic invariant measure is a natural generalization of Haar measure for a simply connected compact Lie group and its projection to flag spaces is a generalization of the normalized invariant volume element The other invariant measures are actually measures having values in line bundles over these spaces these bundle valued measures heuristically arise from coupling the basic invariant measure to Hermitian structures on associated line bundles but in this

infinite dimensional setting they are generally singular with respect to the basic invariant measure **Simplicial**

Dynamical Systems Ethan Akin, 1999 A simplicial dynamical system is a simplicial map $g: K \rightarrow K$ where K is a finite simplicial complex triangulating a compact polyhedron X and K is a proper subdivision of X for example the barycentric or any further subdivision the dynamics of the associated piecewise linear map $g: X \rightarrow X$ can be analyzed by using certain naturally related subshifts of finite type Any continuous map on X can be approximated by such systems Other examples yield interesting

Frames, Bases and Group Representations Deguang Han, David R. Larson, 2000 This work develops an operator theoretic approach to discrete frame theory on a separable Hilbert space It is then applied to an investigation of the structural properties of systems of unitary operators on Hilbert space which are related to orthonormal wavelet theory Also obtained are applications of frame theory to group representations and of the theory of abstract unitary systems to frames generated by Gabor type systems

An Ergodic IP Polynomial Szemerédi Theorem Vitaly Bergelson, Randall McCutcheon, 2000 The authors prove a polynomial multiple recurrence theorem for finitely many commuting measure preserving transformations of a probability space extending a polynomial Szemerédi theorem appearing in BL1 The linear case is a consequence of an ergodic IP Szemerédi theorem of Furstenberg and Katznelson FK2 Several applications to the fine structure of recurrence in ergodic theory are given some of which involve weakly mixing systems for which we also prove a multiparameter weakly mixing polynomial ergodic theorem The techniques and apparatus employed include a polynomialization of an IP structure theory developed in FK2 an extension of Hindman's theorem due to Milliken and Taylor M T a polynomial version of the Hales Jewett coloring theorem BL2 and a theorem concerning limits of polynomially generated IP systems of unitary operators BFM

Rational S^1 -Equivariant Stable Homotopy Theory John Patrick Campbell Greenlees, 1999 The memoir presents a systematic study of rational S^1 equivariant cohomology theories and a complete algebraic model for them It provides a classification of such cohomology theories in simple algebraic terms and a practical means of calculation The power of the model is illustrated by analysis of the Segal conjecture the behaviour of the Atiyah-Hirzebruch spectral sequence the structure of S^1 equivariant K theory and the rational behaviour of cyclotomic spectra and the topological cyclic homology construction

Existence of the Sectional Capacity Robert

Rumely, Chi Fong Lau, Robert Varley, 2000 In the case where the norms are induced by metrics on the fibres of $\mathcal{L}$ we establish the functoriality of the sectional capacity under base change pullbacks by finite surjective morphisms and products We study the continuity of $S_\Gamma(\mathcal{L})$ under variation of the metric and line bundle and we apply this to show that the notion of v -adic sets in $X(\mathbb{C}_v)$ of capacity 0 is well defined Finally we show that sectional capacities for arbitrary norms can be well approximated using objects of finite type **The Defect Relation of Meromorphic Maps on Parabolic Manifolds** George Lawrence Ashline, 1999 This book is intended for graduate students and research mathematicians working in several complex variables and analytic spaces
