

the authors' experience is a natural progression, and a somewhat obvious extension of the work of others who have emphasized the need for a more integrated approach to the family. Indeed, the authors' intention in writing this book is to provide the practitioner with a resource to develop his or her own understanding of a natural growth and development, interrelationship and mutual support, encompassed in a family unit, with special emphasis on contemporary meanings for the African-American family. Thus, the book is for the practitioner, and not just for the student. Indeed, there is a chapter on this important issue. The book also gives a lot of information, in a very readable, easy-to-understand manner.

you can get into the big shoes of your grandfather by considering the time he lived in. It was the 1930s, after all, not the 1990s. So the price tag of \$200,000 for the house is certainly the most likely value of the house and not an inflated value to sell it quickly to the buyer. Because the house is in good condition and the price is a reasonable estimate of the value, the house is a good investment.

Ideas of Order Jacqueline Gargus,1994 *The Nature of Order, Book Two: The Process of Creating Life* Christopher Alexander,2020-03-30 Scientifically this is perhaps the most exciting of the four books How do beautiful creations come into

being Nature can make an infinite number of human faces each one unique each one beautiful The same is true for daffodils streams and stars But man made creations especially the towns and buildings of the 20th century have only occasionally been really good more often mediocre and in the last 50 years have most often been deadly What is the reason for the difference It hinges on the deep nature of the processes we use Merely understanding the geometry of beautiful and living form the topic of Book 1 is not enough to help us create such a living geometry In the 20th century our society was locked into deadly processes which created our current built environment process that most people were not really aware of and did not question Despite their best efforts and intentions architects and planners working within these processes could not achieve a living built environment Life and beauty in the built world arise only from processes which allow living structure to unfold The secret lies in knowing as nature does what must happen in what order what sequence of events allows a living form to unfold successfully Here in Book 2 Alexander puts forward a fully developed theory of living process He defines conditions for a process to be living that is capable of generating living structure He shows how such processes work and how they may be created At the core of the new theory is the theory of structure preserving transformations This concept new in scientific thinking is based on the concept of wholeness defined in Book 1 A structure preserving transformation is one which preserves extends and enhances the wholeness of a system Structure preserving transformations provide the means for any step by step process social biological architectural or technical to reach configurations which are most profound most capable of supporting life The process of creation whether in the formation of a single object or in the piecemeal aggregation of a town requires this sort of generative process a careful and deliberate sequence of steps in which each step creates the context for the next one and each next wholeness is derived from the previous wholeness Our billions of beautiful and unique human faces come from one class of sequences Driven by these sequences an initial cell differentiates again and again until beautiful and complex human beings emerge infinitely various always harmonious Making changes in society so that streets buildings rooms gardens and towns may be generated by hundreds of such sequences requires massive transformations This book is the first blueprint of those transformations
