Wood, 1995 **Psychological Factors in Physical Education and Sport - Volume IV** Manuel Gómez-López, Carla Maria Chicau Costa Borrego, Marianna Alesi, David Manzano Sánchez, 2025-02-19

The regular practice of physical activity has a positive influence on the physical and psychological health of participants. In a context such as sports or physical education classes, knowledge and manipulation of psychological variables such as attention, self-confidence, stress control, anxiety, motivation, cohesion, self-control, or emotional self-regulation, moods, and interpersonal skills can influence sports commitment and sports or academic performance. Furthermore, it has also been confirmed that a highly competitive context under a motivational climate involving the ego can generate feelings of fear of failure and the appearance of feelings of shame, causing in athletes and students some degree of insecurity, anxiety, or stress and avoidance behaviors which will negatively affect the well-being, interpersonal behavior, and performance. Therefore, physical and psychological well-being depends on the social environments in which physical activity and sport are practiced and therefore on the significant agents in the environment. This Research Topic would aim to collect the most recent research on factors influencing physical and psychological well-being and adherence to physical activity in the context of sports and physical education classes.
