Missile Systems:

History of Strategic Air and Ballistic Missile Defense, 2009 From the book's Foreword In the early 1970s the U S Army Center of Military History contracted with BDM Corporation for a history of U S efforts to counter Soviet air and missile threats during the Cold War The resulting two volume History of Strategic Air and Ballistic Missile Defense covers the years 1945-1972 when the strategic arms competition between the United States and the Soviet Union was at its height The study was first published for limited distribution in 1975 and recently declassified with minimal redaction These volumes address the passive and active defense strategies technologies and techniques adopted by both U S and Soviet defense planners Much of their actions centered around three common questions How might we be attacked How shall we defend our country What can technology do to solve the basic problems of defending against this new intercontinental threat **The Missile Defense Controversy** Ernest Yanarella, 2010-09-12 This revised and updated edition identifies the cultural factors and specific administrative agendas that have shaped the way we view ballistic missile technology Three new sections connect our recent sudden shifts in foreign policy to ongoing historical patterns Whether cautioning against the almost neurotic pursuit of absolute security or examining the powerful influence of religion on military buildup Ernest J Yanarella uncovers the deeply ingrained attitudes that will determine the future of American missile defense **The Missile Defense Systems of George W. Bush** Richard Dean Burns, 2010-09-02 President George W Bush's controversial order to deploy a land based ballistic missile defense in 2002 following the unilateral abrogation of the 1972 Antiballistic Missile ABM Treaty did not end five decades of debate Indeed not only were old issues revisited but new ones arose especially given the Bush administration's efforts to extend America's ballistic missile defense BMD network to Central and Eastern Europe Nor did the Bush administration's efforts to use the new BMD system as a deterrent succeed in persuading the so called rogue states of North Korea and Iran to halt their development of missiles or nuclear activities This account reviews the Bush BMD deployment after its first eight years and introduces the manner in which his successor President Barack Obama has sought to deal with the continuing issues *US Strategic and Defensive Missile Systems 1950-2004* Mark Berhow, 2012-09-20 For 40 years following the end of World War II the Western democratic governments and the Eastern Bloc Communist powers were locked in the ideological political and economic struggle of the Cold War The United States and the Soviet Union developed missile systems capable of delivering conventional and nuclear explosives against enemy massed bomber formations in the air and of delivering retaliatory nuclear payloads against ground targets located on distant continents The missile systems played both a defensive role and a potential offensive role which was parlayed to the public as deterrence against attack by the rival bloc This title provides a detailed overview of the fixed launch site strategic missile systems of the United States *Ballistic Missile Defense In The Post-cold War Era* David B H Denoon, 2021-11-28 With the end of the Cold War and the visibility of U S Patriot missile defenses during the 1991 Gulf War the cost and benefits of ballistic missile

defense systems BMD need to be re evaluated In this detailed and balanced study David Denoon assesses new types of short range and intercontinental missile defenses In the post Cold War era two fundamental changes have made missile defense for the United States and its military forces more compelling The United States and Russia no longer see each other as direct threats and there has been a dramatic proliferation of ballistic missile capability in the Third World Consequently U S forces deployed overseas are more likely to be at risk and eventually the United States itself could become vulnerable to missile threats With these changes in mind David Denoon analyzes the current BMD dilemma arguing that active defenses against missiles should be seen as a form of insurance against catastrophe He assesses the likelihood of missile attacks and the appropriate level of investment for the United States to defend against such attacks The book provides an assessment of deterrence and the performance of the Patriot missiles during the 1991 Gulf War critiques the Strategic Defense Initiative and analyzes the prospects for new types of short range and intercontinental missile defenses

Ballistic Missile Defense Ashton B. Carter, David N. Schwartz, 2010-12-01 Defense against nuclear attack so natural and seemingly so compelling a goal has provoked debate for at least twenty years Ballistic missile defense systems formerly called antiballistic missile systems offer the prospect of remedying both superpowers alarming vulnerability to nuclear weapons by technological rather than political means But whether ballistic missile defenses can be made to work and whether it is wise to build them remain controversial The U S Soviet Anti Ballistic Missile Treaty of 1972 restricts testing and deployment of ballistic missile defenses but has not prohibited more than a decade of research and development on both sides As exotic new proposals are put forward for space based directed energy systems questions about the effectiveness and wisdom of missile defense have again become central to the national debate on defense policy This study jointly sponsored by the Brookings Institution and the Massachusetts Institute of Technology examines the strategic technological and political issues raised by ballistic missile defense Eight contributors take an analytical approach to their areas of expertise which include the relationship of missile defense to nuclear strategy the nature and potential applications of current and future technologies the views on missile defense in the Soviet Union and among the smaller nuclear powers the meaning of the Anti Ballistic Missile Treaty for today's technology and the present role and historical legacy of ballistic missile defense in the context of East West relations The volume editors give a comprehensive introduction to this wide range of subjects and an assessment of future prospects In the final chapter nine knowledgeable observers offer their varied personal views on the ballistic missile defense question

Shield of Dreams Stephen J. Cimbala, 2008 This book examines the implications of deploying missile defences by the United States and Russia within the current and next decades Noting that U S plans to locate parts of the global ballistic missile defence system in eastern Europe contributed to a deterioration in U S Russian relations Cimbala discusses how a post Bush post Putin era could open the door either to improved detente or increased acrimony over such issues as missile defences and NATO enlargement the fate of the CFE and INF treaties and U S hegemony in world politics

Missile Defense Steven A. Hildreth, 2004 The United States has pursued missile defenses since the dawn of the missile age shortly after World War II The development and deployment of

missile defenses has not only been elusive but has proven to be one of the most divisive issues of the past generation. The Bush Administration substantially altered the debate over missile defenses. The Administration requested significant funding increases for missile defense programs, eliminated the distinction between national and theater missile defense, restructured the missile defense program to focus more directly on developing deployment options for a layered capability to intercept missiles aimed at U.S. territory across the whole spectrum of their flight path, adopted a new untried development and acquisition strategy, announced U.S. withdrawal from the 1972 Anti-Ballistic Missile Treaty, and is deploying an initial national missile defense capability. Critics, however, take issue with assertions that the threat is increasing, citing evidence that the number of nations seeking or possessing nuclear weapons has actually declined over the past twenty years. Moreover, they argue that the technology for effective missile defense remains immature, that deployment is provocative to allies, friends, and adversaries, and it is a budget buster that reduces the availability of funds to modernize and operate U.S. conventional military forces. They argue especially that some major powers view U.S. missile defense as an attempt at strategic domination, and that others such as China will expand their missile capabilities in response.

Complex Air Defense Tom Karako, Masao Dahlgren, 2022-05-01 In the past five years, Russia, China, and others have accelerated their development of hypersonic missiles to threaten U.S. forces in the homeland and abroad. The current Ballistic Missile Defense System, largely equipped to contend with legacy ballistic missile threats, must be adapted to this challenge. The same characteristics that make hypersonic missiles attractive may also hold the key to defeating them. This CSIS report argues how a new hypersonic defense architecture should exploit hypersonic weapons' unique vulnerabilities and employ new capabilities such as a space sensor layer to secure critical nodes. These changes are not only necessary to mitigate the hypersonic threat but to defeat an emerging generation of maneuvering missiles and aerial threats.

National Missile Defense Erin V. Causewell, 2002 Missiles came of age after World War II, and the United States has pursued missile defenses ever since. The issue has turned out to be one of the most divisive of the past generation, taking into account the Russian position and their threat or perceived threat and the technical difficulties of actually implementing any missile defense. The Bush Administration claims that for the first time, an effective missile defense is technically possible, and that the threat of weapons of mass destruction has spread to many nations and groups other than Russia. The two factors, according to them, make missile defense an urgent priority, justifying the breaking of the widely revered ABM Treaties. Their argument rests partially on a bet that the Russians have now fallen so far behind since the Yeltsin government took over that they cannot keep up technologically. Although terrorism groups will not be deterred by the missile defense being planned, countries like China, North Korea, etc. might well be. This book frames the current debate and also presents the legal considerations for withdrawal from the ABM Treaties.

Sea-Based Ballistic Missile Defense Ronald O'Rourke, 2011-02 As part of its effort to develop an integrated global ballistic missile defense (BMD) system, the DoD is modifying several Navy Aegis cruisers and many Navy Aegis destroyers for BMD.

operations On Sept 17 2009 the Obama Admin announced that it wants to set aside the Bush Admin s proposed European BMD architecture and instead pursue a different European BMD architecture that would involve a significant use of land and sea based SM 3 interceptors and the Aegis BMD system The issue for Congress in this report is What should be the role of sea based systems in U S BMD and are DoD s programs for sea based BMD capabilities appropriately structured and funded
