Mission In The Clouds:

A New NASA/MSFC Mission Analysis Global Cloud Cover Data Base S. C. Brown, W. R. Jeffries, 1985 A global cloud cover data set derived from the USAF 3D NEPH Analysis was developed for use in climate studies and for Earth viewing applications This data set contains a single parameter total sky cover separated in time by 3 or 6 hour intervals and in space by approximately 50 nautical miles Cloud cover amount is recorded for each grid point of a square grid by a single alphanumeric character representing each 5 percent increment of sky cover The data are arranged in both quarterly and monthly formats The data base currently provides daily 3 hr observed total sky cover for the Northern Hemisphere from 1972 through 1977 less 1976 For the Southern Hemisphere there are data at 6 hr intervals for 1976 through 1978 and at 3 hr intervals for 1979 and 1980 More years of data are being added To validate the data base the percent frequency of 0 3 and 0 8 cloud cover was compared with ground observed cloud amounts at several locations with generally good agreement Mean or other desired cloud amounts can be calculated for any time period and any size area from a single grid point to a hemisphere The data base is especially useful in evaluating the consequence of cloud cover on Earth viewing space missions The temporal and spatial frequency of the data allow simulations that closely approximate any projected viewing mission No adjustments are required to account for cloud continuity Optical Payloads for Space Missions Shen-En Qian, 2016-01-26

Jajodia,Krishna Kant,Pierangela Samarati,Anoop Singhal,Vipin Swarup,Cliff Wang,2014-01-23 This book presents a range of cloud computing security challenges and promising solution paths The first two chapters focus on practical considerations of cloud computing In Chapter 1 Chandramouli Iorga and Chokani describe the evolution of cloud computing and the current state of practice followed by the challenges of cryptographic key management in the cloud In Chapter 2 Chen and Sion present a dollar cost model of cloud computing and explore the economic viability of cloud computing with and without security mechanisms involving cryptographic mechanisms The next two chapters address security issues of the cloud infrastructure In Chapter 3 Szefer and Lee describe a hardware enhanced security architecture that protects the confidentiality and integrity of a virtual machine s memory from an untrusted or malicious hypervisor In Chapter 4 Tsugawa et al discuss the security issues introduced when Software Defined Networking SDN is deployed within and across clouds Chapters 5 9 focus on the protection of data stored in the cloud In Chapter 5 Wang et al present two storage isolation schemes that enable cloud users with high security requirements to verify that their disk storage is isolated from some or all

other users without any cooperation from cloud service providers In Chapter 6 De Capitani di Vimercati Foresti and Samarati describe emerging approaches for protecting data stored externally and for enforcing fine grained and selective accesses on them and illustrate how the combination of these approaches can introduce new privacy risks In Chapter 7 Le Kant and Jajodia explore data access challenges in collaborative enterprise computing environments where multiple parties formulate their own authorization rules and discuss the problems of rule consistency enforcement and dynamic updates In Chapter 8 Smith et al address key challenges to the practical realization of a system that supports query execution over remote encrypted data without exposing decryption keys or plaintext at the server In Chapter 9 Sun et al provide an overview of secure search techniques over encrypted data and then elaborate on a scheme that can achieve privacy preserving multi keyword text search The next three chapters focus on the secure deployment of computations to the cloud In Chapter 10 Oktay el al present a risk based approach for workload partitioning in hybrid clouds that selectively outsources data and computation based on their level of sensitivity The chapter also describes a vulnerability assessment framework for cloud computing environments In Chapter 11 Albanese et al present a solution for deploying a mission in the cloud while minimizing the mission s exposure to known vulnerabilities and a cost effective approach to harden the computational resources selected to support the mission In Chapter 12 Kontaxis et al describe a system that generates computational decoys to introduce uncertainty and deceive adversaries as to which data and computation is legitimate The last section of the book addresses issues related to security monitoring and system resilience In Chapter 13 Zhou presents a secure provenance based capability that captures dependencies between system states tracks state changes over time and that answers attribution questions about the existence or change of a system s state at a given time In Chapter 14 Wu et al present a monitoring capability for multicore architectures that runs monitoring threads concurrently with user or kernel code to constantly check for security violations Finally in Chapter 15 Hasan Cam describes how to manage the risk and resilience of cyber physical systems by employing controllability and observability techniques for linear and non linear systems

Scientific and Technical Information Division,1970 *Possibility of Long Range Precipitation Forecasting for the Hawaiian Islands* Samuel B. Solot,1948 In order to establish a meteorological forecasting system it is necessary to find a direct relationship between measurable physical states of the atmosphere and the end product the weather element to be forecast The long range forecaster is quite limited in his choice of physical parameters In fact only the very large scale dynamics of the atmosphere which can be expressed in terms of mean pressure patterns are amenable to long range analysis Thus the problem reduces to finding a link between mean planetary pressure patterns and precipitation in the Hawaiian Islands
