**Digital Activism in Zimbabwe** Tenford Chitanana, 2024-10-21 This book investigates the role of the internet and social media in political processes in non-western and non-democratic contexts. Using Zimbabwe as a case study, the book demonstrates how activists and ordinary people deploy social media, particularly Facebook, to subvert an enduring hegemonic state. However, the book also highlights how authoritarian regimes are in turn learning and adapting to the information age, challenging the impact of digital activism. Studies of digital activism in the Global South are often centred around democracy, but this book paints a more complex picture, examining the role and effect of digital activism in challenging state hegemony in authoritarian contexts. The book notes that while communication technologies help mediate activism, they are also simultaneously constrained by pre-existing and emergent challenges tied to the social and political context and the inherent limitations of those technologies. The book investigates the tactics used by digital activists, the contextual factors and restrictive political environment they operate in, including the role of pro-government activists and ultimately the impact of digital activism given these constraints. From the case of Zimbabwe, the book builds out a broader theoretical analysis of the evolution of third-world protest in the digital age, examining the limitations of activists' actions and the ideological deficit in online activism to ferment a virulent counter-hegemony.

High-performance Construction Materials: Science And Applications Caijun Shi, Yi-lung Mo, 2008-06-11 This book describes a number of high-performance construction materials including concrete, steel fiber reinforced cement, fiber reinforced plastics, polymeric materials, geosynthetics, masonry materials and coatings. It discusses the scientific bases for the manufacture and use of these high-performance materials. Testing and application examples are also included, in particular the application of relatively new high-performance construction materials to design practice. Most books dealing with

construction materials typically address traditional materials only rather than high performance materials and as a consequence do not satisfy the increasing demands of today's society. On the other hand, books dealing with materials science are not engineering oriented with limited coverage of the application to engineering practice. This book is thus unique in reflecting the great advances made on high performance construction materials in recent years. This book is appropriate for use as a textbook for courses in engineering materials, structural materials and civil engineering materials at the senior undergraduate and graduate levels. It is also suitable for use by practice engineers including construction materials, mechanical and civil engineers.
