**Current Topics in Microbiology and Immunology / Ergebnisse der Microbiologie und Immunitätsforschung** W. Arber, W. Henle, P. H. Hofschneider, J. H. Humphrey, N. K. Jerne, P. Koldovský, H. Koprowski, O. Maaløe, R. Rott, H. G. Schweiger, M. Sela, L. Syru?ek, P. K. Vogt, 2012-12-06 Expression of an immune response is the net result of complex synergis tic and antagonistic

activities performed by a variety of cell types It includes macrophages T and B populations which may interact in performance of a response and suppressor cells interfering with it Accordingly a lack of response may not necessarily indicate absence of immunocompetent cells but rather nonexpression of competence Thus one should consider two possible situations which are by no means mutually exclusive to account for immunologic unresponsiveness a one or more of the cell populations composing the synergistic unit is absent or immature and b an antagonistic unit which interferes with the response is dominating In view of this an approach to development of immune reactivity necessitates parallel surveys of development of cells with the potential to perform as well as of cells which can suppress the response Classification of the various cell types has been based so far on their phenotypic properties e g membrane antigen markers cell receptors production and secretion of immunoglobulins etc Genotypically T and B cells may represent either separate independent cell lines or different stages of development within the same cell lineage

**Advances in Immunology**, 1967-01-01 Advances in Immunology **Nutrition and Immunology** D.M. Klurfeld, 2013-11-09 Historically nutrient deficiencies have been of greater concern than dietary excess However along with the realization that deaths due to certain diseases are more prevalent in affluent countries came the conclusion that

nutritional excess is of equal or in greater concern in many nations Because immunologic reactions may play a role development of both cancer and atherosclerosis better understanding of these interrelated phenomena may lead to innovative ideas for control of these diseases There has been considerable interest in the role various nutrients may play in regulating immunologic responses This has been especially true as a possible mechanism by which fat modulates growth of tumors in animals Likewise deficiency or excess of a number of other individual nutrients have been linked to altered immune responses This volume of Human Nutrition A Comprehensive Treatise details the effects of a number of nutrients on immunity The first chapter covers questionable and fraudulent claims linking nutrition and immunity The next chapter examines several aspects of food allergy Ensuing chapters focus on specific nutrients such as fat cholesterol arginine vitamins C A and E carotenoids flavonoids zinc iron copper and selenium There are two chapters on total energy intake affecting immune response one examining protein energy malnutrition and the other describing the effects of food restriction in otherwise healthy animals

*Immunology for Surgeons* J.E. Castro, 2012-12-06 Immunology is a rapidly developing subject The contributors in this book present some components of immunological knowledge which relate to the present and the possible future practice of surgery Aspects of cellular and humoral immunity necessary for understanding are described and consideration given to the mechanisms underlying immunological diseases Whilst the original interest in immune response was related to microbial resistance the recent impetus to surgical immunology has been the resurgence of organ grafting Separate sections of the book deal with clinical organ transplantation the allograft reaction graft rejection and immunogenetics A prerequisite of successful organ grafting is suppressive control of immune responses Approaches to conventional immunosuppression and specific non reactivity are therefore considered One method of cancer therapy is strengthening of the host's immune responses Both experimental and clinical immunotherapy are discussed and components of tumour immunology necessary for their rational understanding are dealt with separately Successful immunotherapy requires monitoring of immune responses but another method for improving results of cancer treatment is earlier diagnosis by immunological methods The book is aimed at practising surgeons who want to know the relevance of immunology to clinical surgery and laboratory scientists needing to understand the applications of their basic concepts I am very grateful both to the authors for their contributions and the editorial staff of MTP Press Limited for their considerable help
