The Biology of Mutualism Douglas H. Boucher, 1985 The view of nature as red in tooth and claw as a jungle in which competition and predation are the predominant themes has long been important in both the scientific and popular literature However in the past decade another view has become widespread among ecologists the idea that mutualisms mutually beneficial interactions between species are just as important as competition and predation This book is one of the first to explore this theme Ideas and theories applicable to all sorts of mutualisms are presented and where appropriate examined in the light of concrete data Themes explored include the organisms involved both animal and plant how specializations evolved once mutualisms formed how mutualisms affect population dynamics and community structure and the role of mutualisms in different environments The book will be of special interest to ecologists and a wide range of biologists

Biotechnology: Challenges and Prospects Wael A. Ismail,Jonathan D. Van Hamme,John J. Kilbane, Ji-Dong Gu,2017-09-08  
 Petroleum hydrocarbons are both a product of and rich substrate for microorganisms from across all Domains of life Rooted  
 deeply in the history of microbiology hydrocarbons have been studied as sources of carbon and energy for microorganisms  
 for over a century As global demand for petroleum and its refined products continues to rise so do challenges associated with  
 environmental pollution oil well souring infrastructure corrosion oil recovery transport refining and upgrading of heavy crude  
 oils and bitumens Advances in genomics synthetic biology and metabolic engineering has invigorated interest in petroleum  
 microbial biotechnology as interest grows in technologies for in situ methane production biodesulfurization and  
 bionitrogenation bio upgrading of heavy crudes microbial enhanced oil recovery corrosion control and biocatalysts for  
 generating value added products Given the complexity of the global petroleum industry and the harsh conditions in which it  
 operates a deeper understanding of the ecophysiology of aerobic and anaerobic microbial communities that have associations  
 with petroleum hydrocarbons is needed if robust technologies are to be deployed successfully This research topic highlights  
 recent advances in microbial enhanced oil recovery methanogenic hydrocarbon metabolism and carbon dioxide sequestration  
 bioremediation microbiologically influenced corrosion biodesulfurization and the application of metagenomics to better
