Mms The Communication Language Of Manufacturing:

MMS: A Communication Language for Manufacturing Consortium CCE-CNMA, 2011-12-22 Today's manufacturing environment is characterised by significant change in the way it is able to respond to its business objectives. Companies now face new challenges to meet customer demands including greater flexibility, a wider range of products, higher quality, improved lead time whilst maintaining competitive prices. The changes manifest in each company will differ but the trend is towards providing a leaner, more responsive organisation. This is reflected in the need for Information Technology (IT) systems to be more integrated across an enterprise and for the systems to be provided on a distributed basis. At the same time it is imperative that the costs associated with these IT systems and the range of skills required by an enterprise to develop and support such systems should be minimal. One way of achieving this objective is to adopt the use of standards. During recent years there has been a lot of activity to standardise the way that manufacturing devices communicate with each other. Considerable progress has been made thanks not least to the success of the international effort of standardisation bodies like ISO, IEEE and IEC and projects applying standardised protocols like Manufacturing Automation Protocol (MAP) in the USA, Communications Network for Manufacturing Applications (CNMA) in Europe and not forgetting Mini MAP and Fieldbus technology.

The Industrial Communication Technology Handbook Richard Zurawski, 2005-02-23 The Industrial Communication Technology Handbook focuses on current and newly emerging communication technologies and systems that are evolving in response to the needs of industry and the demands of industry-led consortia and organizations. today's changing world enterprises need to survive in an ever volatile competitive market environment. Their success will depend on the strategies they practice and adopt. Every year new ideas and concepts are emerging in order for companies to become successful enterprises. Cross Border Enterprises is the new hot topic arising in the business process world at present. Many terms have been coined together and are being driven in the popular business press to describe this new strategy of conducting business i.e. Extended Enterprise Browne et al 1995, O'Neill and Sackett 1994, Busby and Fan 1993, Caskey 1995, Virtual Enterprise Goldmann and Preiss 1991, Parunak 1994, Goranson 1995, Doumeingts et al 1995, Seamless Enterprise Harrington 1995, Inter Enterprise Networking Browne et al 1993, Dynamic Enterprise Weston 1996 and so on. Many people have argued that they mean the same thing just using different words. Others feel they are different. But how different are they? In this paper the authors will present some basic lines required from this new strategy for conducting and coordinating distributed business processes DBP as well as trying to clarify the particularities of two of the widest spread terms related to it: Virtual and Extended Enterprise.

2 CLUSTERS OF PRESSURES The business world currently faces an increased trend towards globalisation, environmentally benign production and customisation of products and processes forcing individual enterprises to work together across the value chain in order to cope with market influences.
