Nuclear Fuel Elements:

Nuclear Fuel Elements Brian R. T. Frost, 2013-10-22 Nuclear Fuel Elements Design Fabrication and Performance is concerned with the design fabrication and performance of nuclear fuel elements with emphasis on fast reactor fuel elements Topics range from fuel types and the irradiation behavior of fuels to cladding and duct materials fuel element design and modeling fuel element performance testing and qualification and the performance of water reactor fuels Fast reactor fuel elements research and test reactor fuel elements and unconventional fuel elements are also covered This volume consists of 12 chapters and begins with an overview of nuclear reactors and fuel elements as well as fuel element design and development based on the reactor operator's approach materials scientist's approach and interdisciplinary approach The reader is then introduced to different types of nuclear fuels and their irradiation behavior considerations for using cladding and duct materials in fuel element design and development and fuel element design and modeling The chapters that follow focus on the testing of fuel element performance experimental techniques and equipment for testing fuel element designs and the performance of fuels for water reactors Fuel elements for gas cooled reactors fast reactors and research and test reactors are also described The book concludes with an assessment of unconventional fuel elements This book will be useful to fuel element technologists as well as materials scientists and engineers Nuclear Reactor Fuel Elements Albert R.

Kaufmann, 1977 **Nuclear Fuel Elements** Henry H. Hausner, James F. Schumar, 1959 **Nuclear Fuel Elements and Method of Making Same**, 1992 A nuclear fuel element for a high temperature gas nuclear reactor that has an average operating temperature in excess of 2000 degree C and a method of making such a fuel element The fuel element is characterized by having fissionable fuel material localized and stabilized within pores of a carbon or graphite member by melting the fissionable material to cause it to chemically react with the carbon walls of the pores The fissionable fuel material is further stabilized and localized within the pores of the graphite member by providing one or more coatings of pyrolytic carbon or diamond surrounding the porous graphite member so that each layer defines a successive barrier against migration of the fissionable fuel from the pores and so that the outermost layer of pyrolytic carbon or diamond forms a barrier between the fissionable material and the moderating gases used in an associated high temperature gas reactor The method of the invention provides for making such new elements either as generally spherically elements or as flexible filaments or as other relatively small sized fuel elements that are particularly suited for use in high temperature gas reactors
