Prenatal Cocaine Exposure Suzanne L. Wenzel, Suzanne Wenzel, John A. Harvey, Barry E. Kosofsky, Martin Y. Iguchi, Paul Steinberg, 2001 New research has shown that children exposed to cocaine before birth are at risk of learning and behavioral problems Such problems have broad implications for education social welfare and criminal justice in the United States However there are numerous opportunities to minimize prenatal cocaine exposure and its impacts and thus to enhance the well being of women and their children This report a collaborative effort of the RAND Drug Policy Research Center and the New York Academy of Sciences presents an overview of the current state of knowledge regarding the effects of cocaine on the developing brain and offers policy considerations for addressing the issues that arise from cocaine use by pregnant women The report discusses three prevention strategies primary prevention preventing substance use before and during pregnancy secondary prevention identifying pregnant women who use drugs and minimizing their drug use and tertiary prevention reducing the adverse consequences of substance exposure in children who were exposed in utero In addition the report presents a number of areas where more research is needed and offers a rationale for making more resources available for women and children affected by cocaine

**Prenatal Cocaine Exposure Scientific Considerations and Policy Implications**, 2001 Prenatal exposure to drugs including cocaine is a significant and preventable cause of developmental disability Almost two decades after the nation first heard stories of crack babies new research has shown that children exposed to cocaine before birth are at risk of learning and behavioral problems Such problems have broad implications for education social welfare and criminal justice in the United States This report presents an overview of the current state of knowledge regarding the effects of cocaine on the developing brain and offers policy considerations for addressing the issues that arise from cocaine use by pregnant women Most of the scientific research discussed in the report is derived from a 1997 New York Academy of Sciences conference on Cocaine Effects on the Developing Brain the proceedings of which have been published as Volume 846 of the Annals of the New York Academy of Sciences Harvey and Kosofsky 1998 The policy implications discussed here are based on material presented at this conference and on investigations conducted by researchers at RAND

to learning and language to poverty and prejudice and to instruction and schooling The editors and authors are distinguished scholars with extensive research experience and publication records and numerous honors and awards from professional organizations representing the range of disciplines in the field of reading disabilities Throughout their contributions are contextualized within the framework of educators struggling to develop concrete instructional practices that meet the learning needs of the lowest achieving readers
