years concern has been growing over a number of studies that have failed to replicate previous results and evidence from larger meta analyses which have pointed to the lack of reproducibility in biomedical research On September 25 and 26 2019 the National Academies of Science Engineering and Medicine hosted a public workshop in Washington DC to discuss the current state of transparency in the reporting of preclinical biomedical research and to explore opportunities for harmonizing reporting guidelines across journals and funding agencies Convened jointly by the Forum on Drug Discovery Development and Translation the Forum on Neuroscience and Nervous System Disorders the National Cancer Policy Forum and the Roundtable on Genomics and Precision Health the workshop primarily focused on transparent reporting in preclinical research but also considered lessons learned and best practices from clinical research reporting This publication summarizes the presentation and discussion of the workshop

**Conflict of Interest and Medical Innovation** Sarah H. Beachy, Institute of Medicine, Adam C. Berger, Board on Health Sciences Policy, Steve Olson, 2014 Scientific advances such as the sequencing of the human genome have created great promise for improving human health by providing a greater understanding of disease biology and enabling the development of new drugs diagnostics and preventive services However the translation of research advances into clinical applications has so far been slower than anticipated This is due in part to the complexity of the underlying biology as well as the cost and time it takes to develop a product Pharmaceutical companies are adapting their business models to this new reality for product development by placing increasing emphasis on leveraging alliances joint development efforts early phase research partnerships and public private partnerships These collaborative efforts make it possible to identify new drug targets enhance the understanding of the underlying basis of disease discover novel indications for the use of already approved products and develop biomarkers for disease outcomes or directed drug use While the potential benefits of collaboration are significant the fact that the relationships among development partners are often financial means that it is vital to ensure trust by identifying disclosing and managing any potential sources of conflict that could create bias in the research being performed together Conflict of Interest and Medical Innovation is the summary of a workshop convened by the Institute of Medicine Roundtable on Translating Genomic Based Research for Health in June 2013 to explore the appropriate balance between identifying and

managing conflicts of interest and advancing medical innovation A wide range of stakeholders including government officials pharmaceutical company representatives academic administrators and researchers health care providers medical ethicists patient advocates and consumers were invited to present their perspectives and participate in discussions during the workshop This report focuses on current conflict of interest policies and their effect on medical innovation in an effort to identify best practices and potential solutions for facilitating innovation while still ensuring scientific integrity and public trust
