Presidential Perspectives On Space Exploration Guiding Metaphors From Eisenhower To Bush:

Presidential Perspectives on Space Exploration Linda Krug, 1991-10-30 In this unique study of space exploration from a metaphorical perspective Krug focuses on presidential rhetoric and the ways in which metaphors influence public understanding and opinion of the American space program *NASA 50th Anniversary Proceedings: NASA's First 50 Years: Historical Perspectives* Steven J. Dick, National Aeronautics and Space Administration, 2010-07-07 On 29 July 1958 President Dwight D Eisenhower signed the National Aeronautics and Space Act creating the National Aeronautics and Space Administration NASA which became operational on 1 October of that year Over the next 50 years NASA achieved a set of spectacular feats ranging from advancing the well established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight In the midst of the geopolitical context of the Cold War 12 Americans walked on the Moon arriving in peace for all mankind Humans saw their home planet from a new perspective with unforgettable Apollo images of Earthrise and the Blue Marble as well as the pale blue dot from the edge of the solar system A flotilla of spacecraft has studied Earth while other spacecraft have probed the depths of the solar system and the universe beyond In the 1980s the evolution of aeronautics gave us the first winged human spacecraft the Space Shuttle and the International Space Station stands as a symbol of human cooperation in space as well as a possible way station to the stars With the Apollo fire and two Space Shuttle accidents NASA has also seen the depths of tragedy In this volume a wide array of scholars turn a critical eye toward NASA's first 50 years probing an institution widely seen as the premier agency for exploration in the world carrying on a long tradition of exploration by the United States and the human species in general Fifty years after its founding NASA finds itself at a crossroads that historical perspectives can only help to illuminate Space Politics and Policy E. Sadeh, 2006-04-11 Space Politics and Policy An Evolutionary Perspective provides a comprehensive survey of Space Policy This book is organized around two themes Space Policy is evolutionary in that it has responded to dramatic political events such as the launching of Sputnik and the Cold War and has undergone dynamic and evolutionary policy changes over the course of the space age Space Policy is an integral part of and interacts with public policy processes in the United States and abroad The book analyzes Space Policy at several levels including historical context political actors and institutions political processes and policy outcomes It examines the symbiotic relationships between policy technology and science provides a review and synthesis of the existing body of knowledge in Space Policy and identifies Space Policy trends and developments from the beginnings of the space age through the current era of the twenty first century *Remembering the Space Age* Steven J. Dick, 2008 From the Publisher Proceedings of October 2007 conference sponsored by the NASA History Division and the National Air and Space Museum to commemorate the 50th anniversary of the Sputnik 1 launch in October 1957 and the dawn of the space age John F. Kennedy and the Race to the Moon J. Logsdon, 2011-02-10 While there are many biographies of JFK and accounts of the early years of US space efforts this book uses primary source material and interviews

with key participants to provide a comprehensive account of how the actions taken by JFK's administration have shaped the course of the US space program over the last 45 years *Space Policy in Developing Countries* Robert C. Harding, 2013 This book analyses the rationale and history of space programs in countries of the developing world Space was at one time the sole domain of the wealthiest developed countries However the last couple of decades of the twentieth century and the first decade of the twenty first century have witnessed the number of countries with state supported space programs blossom Today no less than twenty five developing states including the rapidly emerging economic powers of Brazil seventh largest China second largest and India fourth largest possess active national space programs with already proven independent launch capability or concrete plans to achieve it soon This work places these programs within the context of international relations theory and foreign policy analysis The author categorizes each space program into tiers of development based not only on the level of technology utilised but on how each fits within the country's overall national security and or development policies The text also places these programs into an historical context which enables the author to demonstrate the logical thread of continuity in the political rationale for space capabilities generally This book will be of much interest to students of space power and politics development studies strategic studies and international relations in general **Remembering the space age: Proceedings of the 50th Anniversary Conference** , Proceedings of October 2007 conference sponsored by the NASA History Division and the National Air and Space Museum to commemorate the 50th anniversary of the Sputnik 1 launch in October 1957 and the dawn of the space age *Spaceflight in the Shuttle Era and Beyond* Valerie Neal, 2017-06-27 An exploration of the changing conceptions of the Space Shuttle program and a call for a new vision of spaceflight The thirty years of Space Shuttle flights saw contrary changes in American visions of space Valerie Neal who has spent much of her career examining the Space Shuttle program uses this iconic vehicle to question over four decades worth of thinking about and struggling with the meaning of human spaceflight She examines the ideas images and icons that emerged as NASA Congress journalists and others sought to communicate rationales for or critiques of the Space Shuttle missions At times concurrently the Space Shuttle was billed as delivery truck and orbiting science lab near Earth station and space explorer costly disaster and pinnacle of engineering success The book's multidisciplinary approach reveals these competing depictions to examine the meaning of the spaceflight enterprise Given the end of the Space Shuttle flights in 2011 Neal makes an appeal to reframe spaceflight once again to propel humanity forward Neal may be the one person who knows the space shuttle program better than the astronauts who flew this iconic vehicle Her book casts new light on the program exploring its cultural significance through a thoughtful analysis As one who lived this history I gained much from her broader perspective and deep insights Kathryn D Sullivan retired NASA astronaut and former Administrator of the National Oceanic and Atmospheric Administration A much needed look at how to create a cultural narrative for human spaceflight that resonates with millennials rather than the Apollo generation Quite valuable Marcia Smith Editor SpacePolicyOnline.com

Defining NASA W. D. Kay, 2012-02-01 Most observers would point to the 1969 Apollo moon landing as the single greatest accomplishment of NASA yet prominent scientists engineers and public officials were questioning the purpose of the U S space program even at the height of its national popularity *Defining NASA* looks at the turbulent history of the space agency and the political controversies behind its funding W D Kay examines the agency s activities and behavior by taking into account not only the political climate but also the changes in how public officials conceptualize space policy He explores what policymakers envisioned when they created the agency in 1958 why support for the Apollo program was so strong in the 1960s only to fade away in such a relatively short period of time what caused NASA and the space program to languish throughout most of the 1970s only to reemerge in the 1980s and finally what role the agency plays today **Critical issues in the history of spaceflight** Steven J. Dick, 2018 **A Companion to John F. Kennedy** Marc J. Selverstone, 2014-03-24 b

A COMPANION TO JOHN F KENNEDY A COMPANION TO JOHN F KENNEDY Marc J Selverstone has compiled an indispensable volume of essays on John F Kennedy and his presidency written by a stellar cast of scholars What stands out in sharp relief in this wide ranging and authoritative book is how consequential were Kennedy s thousand days for the United States and for the world and how controversial is his legacy Fredrik Logevall Stephen and Madeline Anbinder Professor of History Cornell University Marc J Selverstone has brought together a remarkable group of scholars who illuminate the many important ideas of and events that occurred during this brief administration This book is the best record of the Kennedy years Alan Brinkley Allan Nevins Professor of American History Columbia University This collection of talented scholars and their research and thoughts on John F Kennedy is an invaluable resource a deeply informed conversation for the ages Richard Reeves writer syndicated columnist and senior lecturer at the Annenberg School for Communication at the University of Southern California **Critical Issues in the History of Spaceflight** Stephen J. Dick, Steven J. Dick, Roger D. Launius, 2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA s goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experiences Amazon **An Annotated Bibliography of the Apollo Program** Roger D. Launius, J. D. Hunley, 2021-04-11 In *An Annotated Bibliography of the Apollo Program* editors Roger D Launius and J D Hunley curate a compelling collection of works that explore the multifaceted legacy of NASA s Apollo missions This anthology stands as a monumental tribute to human ingenuity and cosmic ambition charting the Apollo program s historical trajectory

through a diverse array of textual analyses The editors have meticulously selected materials ranging from technical reports and governmental documents to memoirs and reflections offering a panoramic view that captures both the scientific breakthroughs and the cultural resonances of this pivotal era in space exploration The contributors comprising esteemed historians engineers and cultural critics bring forth a rich tapestry of perspectives These voices collectively delve into the era s technological challenges geopolitical implications and the profound societal changes driven by the space race Aligning with the historical narrative of the late 20th century an epoch marked by scientific triumphs and ideational innovations the anthology serves as a scholarly junction where various interpretations of the Apollo program converge enriching the ongoing dialogue surrounding space exploration heritage For readers seeking a comprehensive understanding of the Apollo program this volume is an essential resource It not only provides insight into the technological marvels of the era but also encapsulates the philosophical and cultural dialogues that emerged alongside them The anthology s breadth affords a rare chance to engage with a multiplicity of viewpoints making it an invaluable tool for educators students and space enthusiasts alike intent on exploring the deeper narratives forged during humanity s bold ventures beyond our terrestrial confines

The Rhetoric of Project Apollo Kathy K. Previs, 2024-12-15 On July 20 1969 Americans not only landed on the Moon but the televised spectacle forever changed the ways in which news and commentary about historical events would be presented to audiences In *The Rhetoric of Project Apollo* Kathy Previs provides a comprehensive analysis of the rhetorical strategies that CBS News employed in covering the Apollo missions from 1968 1972 and documents the role that NASA s public relations office had in televising the exciting moonshots She illustrates how CBS s and NASA s symbolic representations followed a ritual view of communication enabling viewers to make sense of complex technological feats and scientific discoveries while garnering public support for the costly missions Based on four rhetorical categories nationalism romanticism pragmatism and technology Previs also provides an in depth analysis of which narratives have withstood the test of time in how Apollo is remembered on CBS News and across a variety of televised platforms including CNN the History Channel and PBS from 1973 2022 marking the 50th anniversary of Apollo s last mission From Cold War metaphors to now recognizing the role women had in Apollo s successes its story continues to resonate with and inspire audiences around the world

The Superpower Odyssey Yuri Y. Karash, 1999 Korash has background in both space policy and international relations has been a journalist in both Russia and the US was considered a candidate for cosmonaut when the Soviet Union broke up and was involved in the 1993 joint Shuttle Mir missions He traces the Soviet Russian view of the shift from competition to cooperation with the US space program Annotation copyrighted by Book News Inc Portland OR *History of Science in United States* Marc Rothenberg, 2012-10-12 This Encyclopedia examines all aspects of the history of science in the United States with a special emphasis placed on the historiography of science in America It can be used by students general readers scientists or anyone interested in the facts relating to the development of science in the United States Special

emphasis is placed in the history of medicine and technology and on the relationship between science and technology and science and medicine *Outer Space Development, International Relations and Space Law* Edythe Weeks, 2013-02-21 It is the eve of outer space development but few people are aware of this In the absence of awareness people cannot prepare for the opportunities that will arise and so the vast wealth likely to flow to Earth from outer space will cause ever greater inequality and instability in our already unequal and unstable world This book is a call to educators to factor equality and diversity into the process of outer space development by creating a widespread movement to teach outer space development studies to all students especially those who study social and behavioral sciences In calling for this the author is also putting out a call to visionary thinkers to increase public awareness that outer space is already in the process of being developed Her objective is to provide a pedagogical approach aimed at mending the knowledge gap If we fail in this objective we are more likely than ever before to witness ever widening gaps of social and financial inequality The first question that will arise as we embark on this process of course will be Why outer space development People often ask where the money will come from to develop outer space Platinum group metals such as iridium and osmium and various other valuable untapped natural resources have been discovered in abundant quantities and are likely to be mined by companies The discovery of natural resources has sparked development projects in the past These historical patterns of human behavior are occurring again today as companies speed up the process of private spaceship development A myriad of space laws and policies are already in place to support space commercialization Recently the 2010 NASA Authorization Act and various other laws and policies initiated by the US government have placed on the agenda plans to build advanced space transportation systems to privatize spacecraft development to create commercial space habitats space stations and space settlements to initiate commercial space mining to investigate spacecraft trajectory optimization for landing on near Earth asteroids to engage in commercial spaceport construction and interstellar interplanetary international telecommunications and to launch space exploration missions to near Earth asteroids the Moon Mars and Mars's moons US initiatives have in the past been mirrored by the international community and we can expect to see similar patterns arising on a global scale indeed as this book will demonstrate they already are The global community is experiencing economic recession natural disasters lack of opportunity employment anxiety failing K 12 programs widening inequality gaps uprisings revolutions revolts unmet educational goals and a general failure to uplift inspire and provide meaningful opportunities for significant portions of our population People need something that will allow them to focus anew their talents energies abilities and gifts and use this bleak climate as an opportunity for positive change Outer space development is emerging as an answer to this state of crisis The question is To whom will the benefits accrue Many strategic decisions have already been taken regarding space development of which the global general public is unaware Once legal rights to space resources are granted only those with the capital to take advantage of new laws and policies will be in a position to profit from the new space industries Only those who are in a

position to know about outer space development will be in position to take advantage of the opportunities It is important to remember that the global general public has for several decades been paying the start up costs for space exploration research science and technology It is not too late to factor in equality before an infrastructure of inequality is forever with us as we venture to establish the final frontier

Visions of Empire Stephen Prince, 1992-06-30 Visions of Empire explores film's function as a medium of political communication recognizing not just the propaganda film but the various ways that conventional narrative films embody question or critique established social values underlying American attitudes toward historical social and political events Stephen Prince discusses Hollywood film productions of the 1980s in terms of salient political issues of the period including anxieties about declining U S military power the wars in Central America and the prospects for U S intervention the legacy of the Vietnam War and urban decay In analyzing these images and narratives the author also describes and evaluates the cinematic styles available in the Hollywood tradition to filmmakers who address political issues Chapter 1 establishes the theoretical framework by considering features of the political landscape of the Reagan era Theories about political representation and the place of ideology in film are also examined Chapters 2 through 5 focus on the major cycles of political films Chapter 2 examines the new Cold War films which played upon fears of the Soviet menace Rambo Invasion USA Red Dawn and Top Gun Chapter 3 discusses the small group of films Under Fire Salvador El Norte and others that addressed the wars in Latin America and the ways they explained the origins of the conflicts and the U S role therein Various histories and mythologies on film of the Vietnam War are examined in Chapter 4 as examples of the symbolic reconstruction of social memory Chapter 5 looks at politicized science fiction films Blade Runner Aliens Robocop and Total Recall offering critical commentaries on the pathologies of contemporary urban society and capitalism

Gender and the Race for Space Erinn McComb, 2025-06-10 The American astronaut image was informed by early Cold War ideals of masculinity that helped mold a distinctly American anti communist masculinity which appeared on the surface anyway to resolve not only an American crisis of masculinity but helped win the Cold War on an ideological and popular level This American image focused on strict gender binaries of man as the protector controlling technology and containing communism while woman was the passive actor with spaceflight technology left behind in the home waiting for the return of the astronaut husband Allowing women to fly into space would have represented a lack of individual control with spaceflight technology

On the Frontier of Science Leah Ceccarelli, 2013-11-01 The frontier of science is a metaphor that has become ubiquitous in American rhetoric from its first appearance in the public address of early twentieth century American intellectuals and politicians who aligned a mythic national identity with scientific research to its more recent use in scientists' arguments in favor of increased research funding Here Leah Ceccarelli explores what is selected and what is deflected when this metaphor is deployed its effects on those who use it and what rhetorical moves are made by those who try to counter its appeal In her research Ceccarelli discovers that the frontier of science evokes a scientist who is typically male a risk taker an

adventurous loner someone separated from a public that both envies and distrusts him with a manifest destiny to penetrate the unknown It conjures a competitive desire to claim the riches of a new territory before others can do the same Closely reading the public address of scientists and politicians and the reception of their audiences this book shows how the frontier of science metaphor constrains American speakers helping to guide the ends of scientific research in particular ways and sometimes blocking scientists from attaining the very goals they set out to achieve
