Disabling Policies? Gillian Fulcher, 2015-12-22 First published in 1989 this book is about integrating or mainstreaming policies looking specifically at how to improve circumstances for schoolchildren with disabilities or handicaps and their teachers The author draws on her experiences both within and outside the academic institution to conceptualise and theorise policy so as to place this policy in a political framework and locate it in a wider model of social life This model is then used to disentangle the nature and effects of policy practices surrounding integration and mainstreaming looking at practice in various parts of Europe the US and Australia at that time Although written at the

end of the 1980s this book discusses topics that are still relevant today **From Them to Us** Mel Ainscow, Tony Booth, 2005-06-23 Inclusive education has become a phrase with international currency shaping the content of conferences and national educational policies around the world But what does it mean Is it about including a special group of disabled learners or students seen to have special needs them or is it concerned with making educational institutions inclusive responsive to the diversity of all their students us In this unique comparative study the editors have brought together an international team of researchers from eight countries to develop case studies which explore the processes of inclusion and exclusion within a school or group of schools set in its local and national context The study includes classroom observation the experiences of the school day of students and interviews with staff students parents and school governors Through an innovative juxtaposition of the case studies and commentaries on them differences of perspective within and between countries are revealed and analysed The study arose from a dissatisfaction with previous research which presents national perspectives or seeks findings that have global significance This book avoids such simplification and draws attention to the problems of translation of practice across cultures The editors start from an assumption of diversity of perspective which like the diversity of students within schools can be viewed as problematic or as a resource to be recognized and celebrated

Curriculum, Pedagogy and Educational Research John Elliott, Nigel Norris, 2012-03-15

Lawrence Stenhouse was one of the most distinguished original and influential educationalists of his generation His theories about curriculum curriculum development pedagogy teacher research and research as a basis for teaching remain compelling and fresh and continue to be a counterpoint to instrumental and technocratic thinking in education In this book renowned educationalists describe Stenhouse's contribution to education explore the contemporary relevance of his thinking and bring his work and legacy to the attention of a wide range of students teachers teacher educators and others involved in education Stenhouse saw the primary aim of education as the development of individuality through a creative and critical engagement with culture He was an early advocate of inclusive education and was committed to making available to all pupils an education that was challenging and empowering For Stenhouse many of the problems of education stemmed not so much from its content as from the terms and conditions under which students were required to access it Consequently he pioneered an approach to curriculum reform that stressed the quality of the educational process and the values that defined it as opposed to rational curriculum planning which stressed the pre specification of measurable learning outcomes Stenhouse devised the curriculum reform movement's most ambitious strategy the process model and was its principal theorist His idea of the teacher as researcher lay at the heart of this strategy as the means by which the values that define a worthwhile educational process could be progressively realized by teachers in concrete forms of action within their

classrooms and schools What marked out Stenhouse's unique contribution to the field of curriculum was his distinctive conceptualisation of the relationship between the teacher authority the learner autonomy and the subject matter understanding Founded on his epistemological scepticism and forged in his encounters with expertly discerning teachers who valued and nurtured the intellectual independence of students Stenhouse acquired an acute appreciation of the ways in which teaching enhances or inhibits develops or displaces the potential for autonomous thinking of students He changed the relationship between curriculum theory educational research and teachers placing teachers right at the heart of the curriculum development process and the teacher as researcher at the heart of teacher professionalism
