International Textbook of Diabetes Mellitus R. A. DeFronzo, E. Ferrannini, Paul Zimmet, George Alberti, 2015-03-05 The International Textbook of Diabetes Mellitus has been a successful well respected medical textbook for almost 20 years over 3 editions Encyclopaedic and international in scope the textbook covers all aspects of diabetes ensuring a truly multidisciplinary and global approach Sections covered include epidemiology diagnosis pathogenesis management and complications of diabetes and public health issues worldwide It incorporates a vast amount of new data regarding the scientific understanding and clinical management of this disease with each new edition always reflecting the substantial advances in the field Whereas other diabetes textbooks are primarily clinical with less focus on the basic science behind diabetes ITDM's primary philosophy has always been to comprehensively cover the basic science of metabolism linking this closely to the pathophysiology and clinical aspects of the disease Edited by four world famous diabetes specialists the book is divided into 13 sections each section edited by a section editor of major international prominence As well as covering all aspects of diabetes from epidemiology and pathophysiology to the management of the condition and the complications that arise this fourth edition also includes two new sections on NAFLD NASH and non traditional associations with diabetes and clinical trial evidence in diabetes This fourth edition of an internationally recognised textbook will once again provide all those involved in diabetes research and development as well as diabetes specialists with the most comprehensive scientific reference book on diabetes available

Experimental Approaches to Diabetic Retinopathy H.-P. Hammes, M. Porta, 2010 This volume sets the stage for clinical experts working with diabetic patients as well as for researchers by describing the clinical presentations of retinopathy and their anatomical and functional correlates It reviews currently available experimental models in animals The impact of retinal pericytes neuroglia and specifically Müller cells are discussed in detail The volume addresses a variety of current scientific discussions about mechanisms of damage such as growth factors and the VEGF PEDF balance in the diabetic eye the ocular renin angiotensin system and leukocyte interactions with the microvasculature among others Stem and progenitor cells in the retina are discussed as potential directions for future investigation The final chapters return to emerging clinical aspects including current approaches to retinopathy as a predictor of cardiovascular risk and how knowledge can be translated from bench to bedside Bridging a widening gap in medical research between basic scientists who may lose sight of the clinical presentations and clinical researchers who may grow unaware of the limits of experimental models this volume serves as a reference platform for endocrinologists diabetologists ophthalmologists as well as for scientists involved in clinical and basic research in diabetic retinopathy and other vascular complications of diabetes

Ethics and Research with Children Eric Kodish M.D., 2005-03-10 In this edited volume a diverse group of scholars present and discuss challenging cases in the

field of pediatric research ethics After years of debate and controversy fundamental questions about the morality of pediatric research persist Is it ever permissible to use a child as a means to an end How much authority should parents have over decisions about research that involves young children What should be the role of the older child in decisions about research participation How do the dynamics of hope and desperation influence decisions about research involving dying children Should children or their parents be paid for participation in research What about economic incentives for doctors researchers and the pharmaceutical industry Most importantly how can the twin goals of access to the benefits of clinical research and protection from research risk be reconciled Following an introductory overview by editor Eric David Kodish the book is divided into three sections of case studies Research Involving Healthy Children Research Involving At Risk Children and Research Involving Children with Serious Illness Each case raises compelling ethical issues and the analysis presented in each chapter illuminate the challenges posed across a wide spectrum of both research protocols and stories of individual case based approach this book provides a balanced and thorough account of the enduring dilemmas that arise when children become research subjects
