Prevention of Venous Thrombosis and Pulmonary Embolism J.G. Sharnoff,2012-12-06 This book has been prompted by recent advances in the safe prevention of thromboembolism by subcutaneous heparin prophylaxis in particular postoperatively It has been correctly called by S Sherry a major breakthrough in medicine Although thromboembolism was first

recognized by Laennec in 1819 and defined by Virchow in 1846 its development was not well understood and its prevention escaped our best efforts until now This all too common sudden unexpected and unwanted form of morbidity and mortality always referred to in the surgical patient as postoperative pulmonary thromboembolism has now become the major complication of all surgery However it occurs with equal frequency in hospitalized non operative patients as well so the latter are also in need of this prophylaxis if this calamity is to be avoided The mass of literature generated in the past few years has produced some confusion as to which of a number of methods of heparin prophylaxis gives the best results It is the intention of this book to help clarify the situation and thereby resolve the problem by offering a procedure of subcutaneous heparin prophylaxis which is acceptable safe and simple to administer Recent technical advances offer the hope of attaining this goal
