Caputo, 1988 Aimed at human services managers and students of administration this highly challenging book demonstrates how computer use and information systems can alter the bases of power and decision making authority as they currently exist in an organization Author Richard Caputo explores the changes in the availability nature and use of information that have had important implications not only for administrators but for direct service professionals as well Management and Information Systems in Human Services examines the kinds of organizational problems likely to result from the implementation of automated information systems and identifies effective solutions It will further challenge your thinking by elaborating the operational premises that the distribution of the decision load reflects the organizational structure of an agency and that the introduction of an information system in any organization challenges the legitimacy upon which that structure rests This important textbook is an ideal core or supplementary text for students in the human services including education social welfare public administration and public policy programs **Personnel Literature** ,1983 *PC Mag* ,1984-04-17 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology **Technology, Pessimism, and Postmodernism** Yaron Ezrahi, E. Mendelsohn, Howard Segal, 2013-03-07 HOWARD P SEGAL FOR THE EDITORS In November 1979 the Humanities Department of the University of Michigan s College of Engineering sponsored a symposium on Technology and Pessimism The symposium included scholars from a variety of fields and carefully balanced

critics and defenders of modern technology broadly defined. Although by this point it was hardly revolutionary to suggest that technology was no longer automatically equated with optimism and in turn with unceasing social advance, the idea of linking technology so explicitly with pessimism was bound to attract attention. Among others, John Noble Wilford, a New York Times science and technology correspondent, not only covered the symposium but also wrote about it at length in the Times the following week. As Wilford observed, "Whatever their disagreements, the participants agreed that a mood of pessimism is overtaking and may have already displaced the old optimistic view of history as a steady and cumulative expansion of human power, the idea of inevitable progress born in the Scientific and Industrial Revolutions and dominant in the 19th century and for at least the first half of this century. Such pessimism, he continued, is fed by growing doubts about society's ability to rein in the seemingly runaway forces of technology." Though the participants conceded that in many instances technology was more the symbol than the substance of the problem.

Beyond Paradise Jack Clayton Swearingen, 2007-03-01. Technology is shaping our culture and controlling our lives for better or for worse. Often technology's benefits far outweigh its negative impacts, and technological advances can seem boundless. But the scientific technological worldview tends to override other value systems. Indeed, this technological way of thinking has influenced many contemporary ideas, beliefs, values, habits, and ways of communicating. Furthermore, in addition to technology's well-known environmental impacts, social, aesthetic, and spiritual consequences are now emerging. How can we balance positive physical effects of technology with other ambiguous or negative impacts? Some of the decisions we face have no precedent from which to draw wisdom. For this reason, the resources of Scripture and the Christian tradition must be brought to bear on technological questions. How is technology used and abused today? Does technological progress lead to human progress? How can Scripture help us both individually and collectively to manage technology's impact in proactive ways? Swearingen uncovers a comprehensive scriptural mandate for managing technology. On his way to a theology of technology, he evaluates which advances are moving society in directions consistent with God's purposes. **Beyond Paradise: Technology and the Kingdom of God** aims to provide practical means for assessing technology's influence and for steering technology and its effects toward biblical ends.
