Environmental Movement Elizabeth Ring, John Henricksson, 1991-01-01 A biography of the biologist focusing on her childhood in Pennsylvania her growing interest as an adult in environmental concerns and the importance of her book *Silent Spring* in exposing the environmental harm done by pesticides **Writing Nature in Cold War American Literature**

Sarah Daw, 2018-08-23 First book length ecocritical study of Cold War American literature Compelling analyses of the function and representation of Nature in a wide range of Cold War fiction and poetry by authors including Paul Bowles J D Salinger Jack Kerouac Allen Ginsberg and Mary McCarthy reveals the prevalence of portrayals of Nature as an infinite interdependent system in American literature written between 1945 and 1971 Daw astutely highlights the Cold War's often overlooked role in environmental history and argues that Rachel Carson's *Silent Spring* 1962 can be considered as part of a trend of increasingly ecological depictions of Nature in literature written after 1945 By exploring the most recent developments in the field of ecocriticism the book is embedded within current ecocritical debates concerning the Anthropocene and anthropogenic climate change Key Features Contains five case studies of six Cold War writers Paul Bowles Peggy Pond Church J D Salinger Jack Kerouac Allen Ginsberg and Mary McCarthy Offers an in depth exploration of the influences behind each writer's presentation of Nature Shows the Cold War to be a time of seismic change in the human's relationship to the environment and demonstrates the degree to which this inflects Cold War literature Engages with the most recent developments in the field of ecocriticism which drive the study's analytical methodology and embed the book within current ecocritical debates *Sustainable Environmental Management* Jatna Supriatna, Ralph Lenz, 2025-08-02

Environmental sustainability in the developing world is the focus of this book Our purpose will not however be to produce an endless list of huge numbers of facts about the many developing countries Indonesia could be considered a proto typical example of a developing world country As an archipelago situated along the equator in Southeast Asia its location is ideal for a prototype almost all developing countries are tropical Kalimantan Sumatra and Papua in particular contain a substantial

portion of the world's remaining equatorial rainforests rainforest management is among the most pressing global sustainability problems. However, Indonesia's forests are far from monolithic; they include a large set of different biome types. Indonesia's population is multi-ethnic, a characteristic not only of other very large developing countries like India and Nigeria but of nearly every African country and of many other formerly colonized regions. Another factor favoring a prototype designation is a relatively recent escape from the category of severe underdevelopment. Indonesia ranked eighth in the world in real per capita GDP growth rate between 1960 and 2018, not an atypical outcome for Southeast Asian market economies. Thailand, Malaysia, Singapore, and Myanmar ranked even higher. EarthTrends of World Resources Institute. Like most developing countries, economic growth has mainly been sparked by exports of energy and mineral extraction products and plantation crops. There is also manufacturing growth. Indonesia has seven million cities and the world's sixth largest metro area by population. At the same time, many of the population remain engaged in agriculture; many are extremely impoverished. Environmental problems Indonesia encounters in its path to economic development are typical of those in other developing countries, and solutions it may find can serve as guidelines for other developing countries anticipating a similar economic take-off. This book consists of 21 chapters on sustainability efforts in Indonesia by many stakeholders: government, local government, private sectors, NGOs, and communities.

The Law of Environmental Damage Marie-Louise Larsson, 2023-09-20. From its starting point within international law throughout its progression from regional to national law, *The Law of Environmental Damage* combines the disciplines of environmental law, liability law, and insurance in its analysis of the development of reparative environmental law. In the model adopted, three generations of reparative schemes are identified based on civil liability or administrative liability or self-taken measures from the area of insurance. The analysis applied is based on factors of standard and designation of liability as well as the definition and assessment of environmental damage. Issues such as environmental lender liability and damage to public natural resources are highlighted. The results of the study are evaluated within the framework of a theory of environmental efficiency among other factors; the reparative effect of liability rules is discussed.

Environmental Security and Gender Nicole Detraz, 2014-08-21. Over the past 20 years, scholars, policymakers, and the media have increasingly recognized the links between both traditional and non-traditional security issues and the changing condition of the global environment. Concepts such as environmental security and resource conflict have been used to hint at these significant linkages. While there has been a good deal of scholarly work conducted that seeks to identify the ways that actors link these concepts, there has been little examination of the intersection between approaches to environmental security and gender. This book explores this intersection to provide an insight into the gendered nature of both global environmental politics and security studies. It examines how the issues of security and the environment are linked to theory and practice and the extent

to which gender informs these discussions By adopting a feminist environmental security discourse this book provides crucial redefinitions of key concepts and offers new insights into the ways we understand security environment connections Case studies evaluate if and how environment and security discourses are being used to understand a range of environmental issues and how a feminist environmental security discourse contributes to our understanding of security environment connections This multidisciplinary volume draws on literature from the environmental sciences security studies and sociology to highlight the complex human insecurities that often accompany environmental change As conceptualizations of security continue to shift and broaden to include environmental issues and concerns it is imperative that gender informs the debate

Civilizing Nature Bernhard Gissibl, Sabine Höhler, Patrick Kupper, 2012-11-01 National parks are one of the most important and successful institutions in global environmentalism. Since their first designation in the United States in the 1860s and 1870s they have become a global phenomenon. The development of these ecological and political systems cannot be understood as a simple reaction to mounting environmental problems nor can it be explained by the spread of environmental sensibilities. Shifting the focus from the usual emphasis on national parks in the United States, this volume adopts an historical and transnational perspective on the global geography of protected areas and its changes over time. It focuses especially on the actors, networks, mechanisms, arenas, and institutions responsible for the global spread of the national park and the associated utilization and mobilization of asymmetrical relationships of power and knowledge contributing to scholarly discussions of globalization and the emergence of global environmental institutions and governance.

Planning in the USA J. B. Cullingworth, Roger W. Caves, 2009 This revised edition continues to provide a comprehensive introduction to the policies and practices of planning. Discussing land use, urban planning, and environmental protection policies, the text explains the nature of the planning process.

Environmental Sustainability Education for a Changing World Erika Péntzesné Kónya, Martin Haigh, Josef Křeček, 2021-06-22 Globally there is a need to promote and empower practical action towards better environmental conservation and greater sustainability. Education aspires to achieve and motivate this one mind at a time. This book advances a future-oriented vision of the development of environmental sustainability education in settings outside the high school. It provides practical guidance for teacher practitioners and policy makers in community-oriented environmental sustainability education. It promotes a modern holistic approach to sustainability learning in and by the community through participative engagement with sustainability issues. Its special foci include working with volunteers and citizen scientists through museums or through re-purposing Higher Education. Its approach emphasises the implementation of the United Nations Sustainable Development Goals and cooperation with environmental management professionals. This book's cosponsors include the International Association for Headwater Control and FAO European Forestry Commission's Working Party on the Management of Mountain Watersheds as well as the International Environmental Education Conferences Eger, Hungary and the Hungarian Academy of Science's Subcommittee on Future Studies. Community education has long been a goal for environmental management whose practitioners realise that interventions such as biodiversity conservation are only truly sustainable when supported by the local land user and stakeholder communities; this depends upon these stakeholders understanding why intervention is necessary.
