Radar And Sonar:

Radar, Sonar, and Holography Winston E. Kock, 2013-10-22 Radar Sonar and Holography An Introduction provides an introduction to the technology of radar and sonar Because the new science of holography is affecting both these fields quite strongly the book includes an explanation of the fundamental principles underlying this new art including the subjects of wave coherence interference and diffraction and of the hologram process itself Finally numerous examples are discussed which show how holography is providing new horizons to radar and sonar systems The book thus also provides a simple approach to the new technology of holography The discussions clarify the basic difference that exist between photography and holography on the one hand and between standard sonar and radar on the other and the hologram versions of these two technologies The book should be useful as a supplementary reading assignment to early college students in science and engineering and also to senior high students having a bent for science and engineering **Blip, Ping, and Buzz** Mark

Denny, 2007-10-16 Have you ever wondered how stealth planes achieve invisibility how sunken ships are found or how fishermen track schools of fish in vast expanses of ocean Radar and sonar echolocation a simple matter of sending receiving and processing signals Weaving history with simple science Mark Denny deftly reveals the world of radar and sonar to the curious reader technology buff and expert alike He begins with an early history of the Chain Home radar system used during World War II and then provides accessible and engaging explanations of the physics that make signal processing possible Basic diagrams and formulas show how electromagnetic and sound waves are transmitted received and converted into images allowing you to literally see in the dark A section on bioacoustic echolocation with a focus on the superior sonar systems of bats and whales and a discussion of the advanced technology of next generation airborne signal processors opens the imagination to fascinating possibilities for the future **Radar and Sonar Imaging and Processing** Andrzej
