Krzysztof Jaskólski, 2014-08-01 Doctoral Thesis Dissertation from the year 2014 in the subject Nautical Science course language English abstract Automatic Identification System AIS is a data exchange system which was introduced to improve shipping safety and the possibility of exchanging data at a country and international level about ships heading to or from ports as well as exchanging data relating to passengers and dangerous or environment polluting cargo carried by ships The main purpose of introducing AIS was to offer a wider spectrum of available continuous and reliable navigational data Apart from being useful for traffic control in a marine area AIS data can be a very important source of information used in collision avoidance process However some reservations are voiced with regard to the unconditional reliance on the data transferred through this channel The information integrity problem had been raised already at the stage of system implementation and some fragmentary outcomes were published in the past However it can be assumed that the results from the system introduction period may not represent reality Thus it seems reasonable to base the assessment on theoretical analysis through the development of multi criteria model describing the AIS information integrity The research was performed on data recorded in the period between 04 04 2006 r and 08 01 2012 r selected 55 weeks 385 days in the laboratory of Institute of Navigation and Hydrography Only full 24 hour recordings of AIS signals were selected for the analysis Fifty five measurement sessions were used to determine the limit probability for availability and integrity exponential of information system expected value of system lifetime expected value of system failure time failure rate renewal rate Utilizing homogenous Markov Chains prediction of the state of availability and integrity of selected AIS information components was carried out The proposed research approach in many cases gave differentiated results The research outcomes presented in the paper lead to the conclusion that AIS could deliver useful supplementary information in the process of collision avoidance

Introduction to Digital Navigation Alexander Arnfinn Olsen, 2024-02-27 This book focuses on Coastal and Ocean Navigation with an emphasis on digital navigation using ECDIS and would be useful to both experienced seafarers as an aide memoire and also to cadets and trainees embarking on their maritime careers The text has been developed for modern day ship s navigator in the digital era It is written from the perspective that the reader s vessel will be navigated using an IMO type approved electronic chart and display information system ECDIS as opposed to traditional chart based passage planning As such the book focuses on the main principles associated with position and direction of the earth s surface geodesy projects and grids digital navigation electronic chart and data information systems fixing internal aids to navigation and systems external aids to navigation tides and currents ocean navigation coastal navigation pilotage and blind pilotage anchoring navigational errors relative velocity and bridge organisation and management **Code of Federal Regulations, Title 14, Aeronautics and Space, PT. 110-199, Revised as of January 1, 2012** Office of the Federal Register (U.S.) Staff, 2012-04-04 *Techniques for Ship Handling and Bridge Team Management* Hiroaki Kobayashi, 2019-11-06 Hiroaki Kobayashi has trained 1500 mariners in ship handling over twenty years and he has systematized the methods of safe

navigation into nine elemental techniques Taking a rigorous and scientific look at good practice and attitudes good seamanship can be viewed as a series of concrete technical functions which can be in terms of competencies By giving proper attention to human factors the conditions for maintaining system safety can be defined and the interaction of human competencies and environmental conditions and their effects on system safety can be recognised System safety in turn depends on good bridge team management with particular emphasis on communication cooperation and leadership communication for the exchange of information cooperation to smooth team activities and leadership to ensure that each member of the team performs successfully
