Radar Resolution And Compleximage Analysis:

Radar Resolution and Complex-image Analysis August W. Rihaczek, Stephen J. Hershkowitz, 1996 Target identification and other modern day radar problems can't be solved by conventional radar technology but they can be solved with the ground breaking signal processing and analysis methods presented in this unique expertly authored book [Radar Imaging of Airborne Targets](#) Brett Borden, 1999-01-01 Radar based imaging of aircraft targets is a topic that continues to attract a lot of attention particularly since these imaging methods have been recognized to be the foundation of any successful all weather non cooperative target identification technique Traditional books in this area look at the topic from a radar engineering point of view Consequently the basic issues associated with model error and image interpretation are usually not addressed in any substantive fashion Moreover applied mathematicians frequently find it difficult to read the radar engineering literature because it is jargon laden and device specific meaning that the skills most applicable to the problem's solution are rarely applied Enabling an understanding of the subject and its current mathematical research issues [Radar Imaging of Airborne Targets A Primer for Applied Mathematicians and Physicists](#) presents the issues and techniques associated with radar imaging from a mathematical point of view rather than from an instrumentation perspective The book concentrates on scattering issues the inverse scattering problem and the approximations that are usually made by practical algorithm developers The author also explains the consequences of these approximations to the resultant radar image and its interpretation and examines methods for reducing model based error *Time-frequency Transforms for Radar Imaging and Signal Analysis* Victor C. Chen, Hao Ling, 2002 Here's an innovative hands on book on time frequency transforms for radar imaging and signal analysis It teaches you more efficient ways to extract dispersive scattering features detect and extract weak signals in noise form clear radar images estimate parameters and perform motion compensation detect and track moving targets in the synthetic aperture radar and analyze vibration and rotation induced micro Doppler This unique resource introduces a new image formation algorithm based on time frequency transforms showing its advantage over the more conventional Fourier based image formation Referenced with over 170 equations and 80 illustrations the book presents new algorithms that help improve the result of radar imaging and signal processing Moreover the authors discuss future trends in time frequency to analyze micro Doppler and provide you with a newly developed time frequency approach to radar signal and image processing to help you solve problems associated with conventional approaches **Radar System Analysis and Modeling** David K.
