Resolution Methods For The Decision Problem:

Resolution Methods for the Decision Problem C. Fermüller, 1993-07-29 This volume contains work on the decision problem done in Kazan Russia Tallinn Estonia and Vienna Austria The authors met several times to discuss and exchange their results and finally decided to write this monograph together Besides a unified treatment of previously published results there are many new results first presented in this volume The monograph opens with an introduction and a chapter on terminology followed by chapters on Semantic clash resolution as decision procedure Completeness of ordering refinements Semantic tree based resolution variants Deciding the class K by an ordering refinement A resolution based method for building finite models A final chapter on applications completes the volume

The Classical Decision Problem Egon Börger, Erich Grädel, Yuri Gurevich, 2001-08-28 This book offers a comprehensive treatment of the classical decision problem of mathematical logic and of the role of the classical decision problem in modern computer science The text presents a revealing analysis of the natural order of decidable and undecidable cases and includes a number of simple proofs and exercises

Automated Deduction -CADE-13 Michael A. McRobbie, J.K. Slaney, 1996-07 This book constitutes the refereed proceedings of the 13th International Conference on Automated Deduction CADE 13 held in July August 1996 in New Brunswick NJ USA as part of FLoC 96 The volume presents 46 revised regular papers selected from a total of 114 submissions in this category also included are 15 selected system descriptions and abstracts of two invited talks The CADE conferences are the major forum for the presentation of new results in all aspects of automated deduction Therefore the volume is a timely report on the state of the art in the area

Theorem Proving with Analytic Tableaux and Related Methods Peter Baumgartner, Reiner Hahnle, Joachim Posegga, 1995-04-26 This volume constitutes the proceedings of the 4th International Workshop on Theorem Proving with Analytic Tableaux and Related Methods TABLEAU 95 held at Schloss Rheinfels St Goar Germany in May 1995 Originally tableau calculi and their relatives were favored primarily as a pedagogical device because of their advantages at the presentation level The 23 full revised papers in this book bear witness that these methods have now gained fundamental importance in theorem proving particularly as competitors for resolution methods The book is organized in sections on extensions modal logic intuitionistic logic the connection method and model elimination non clausal proof procedures linear logic higher order logic and applications

Handbook of Automated Reasoning Alan J.A. Robinson, Andrei Voronkov, 2001-06-22 Handbook of Automated Reasoning

Logic and Foundations of Mathematics Andrea Cantini, Ettore Casari, Pierluigi Minari, 2013-03-09 The 10th International Congress of Logic Methodology and Philosophy of Science which took place in Florence in August 1995 offered a vivid and comprehensive picture of the present state of research in all directions of Logic and Philosophy of Science The final program counted 51 invited lectures and around 700 contributed papers distributed in 15 sections Following the tradition of previous LMPS meetings some authors whose papers aroused particular interest were invited to submit their works for publication in a collection of selected contributed papers

Due to the large number of interesting contributions it was decided to split the collection into two distinct volumes one covering the areas of Logic Foundations of Mathematics and Computer Science the other focusing on the general Philosophy of Science and the Foundations of Physics As a leading choice criterion for the present volume we tried to combine papers containing relevant technical results in pure and applied logic with papers devoted to conceptual analyses deeply rooted in advanced present day research After all we believe this is part of the genuine spirit underlying the whole enterprise of LMPS studies

Automated Reasoning Rajeev Gore,Alexander Leitsch,Tobias Nipkow,2003-06-29 This book constitutes the refereed proceedings of the First International Joint Conference on Automated Reasoning IJCAR 2001 held in Siena Italy in June 2001 The 37 research papers and 19 system descriptions presented together with three invited contributions were carefully reviewed and selected from a total of 112 submissions The book offers topical sections on description modal and temporal logics saturation based theorem proving applications and data structures logic programming and nonmonotonic reasoning propositional satisfiability and quantified Boolean logic logical frameworks higher order logic and interactive theorem proving equational theorem proving and term rewriting tableau sequent and natural deduction calculi and proof theory automata specification verification and logics of programs and nonclassical logics

Automated Deduction in Classical and Non-Classical Logics Ricardo Caferra,Gernot Salzer,2003-07-31 This volume presents a collection of thoroughly reviewed revised full papers on automated deduction in classical modal and many valued logics with an emphasis on first order theories Five invited papers by prominent researchers give a consolidated view of the recent developments in first order theorem proving The 14 research papers presented went through a twofold selection process and were first presented at the International Workshop on First Order Theorem Proving FTP 98 held in Vienna Austria in November 1998 The contributed papers reflect the current status in research in the area most of the results presented rely on resolution or tableaux methods with a few exceptions choosing the equational paradigm

Automated Deduction - CADE-16 Harald Ganzinger,2003-07-31 This book constitutes the refereed proceedings of the 16th International Conference on Automated Deduction CADE 16 held in Trento Italy in July 1999 as part of FLoC 99 The 21 revised full papers presented were carefully reviewed and selected from a total of 83 submissions Also included are 15 system descriptions and two invited full papers The book addresses all current issues in automated deduction and theorem proving ranging from logical foundations to

 Machines *Automated Model Building* Ricardo Caferra, Alexander Leitsch, Nicolas Peltier, 2013-11-09 On the history of the
 book In the early 1990s several new methods and perspectives in automated deduction emerged We just mention the
 superposition calculus meta term inference and schematization deductive decision procedures and automated model building
 It was this last field which brought the authors of this book together In 1994 they met at the Conference on Automated
 Deduction CADE 12 in Nancy and agreed upon the general point of view that semantics and in particular construction of
 models should play a central role in the field of automated deduction In the following years the deduction groups of the
 laboratory LEIBNIZ at IMAG Grenoble and the University of Technology in Vienna organized several bilateral projects
 promoting this topic This book emerged as a main result of this cooperation The authors are aware of the fact that the book
 does not cover all relevant methods of automated model building also called model construction or model generation instead
 the book focuses on deduction based symbolic methods for the construction of Herbrand models developed in the last 12
 years Other methods of automated model building in particular also finite model building are mainly treated in the final chapter
 this chapter is less formal and detailed but gives a broader view on the topic and a comparison of different approaches
 How to read this book In the introduction we give an overview of automated deduction in a historical context taking into
 account its relationship with the human views on formal and informal proofs Sat2000 Ian Gent, Hans van Maaren, Toby
 Walsh, 2000 The book is devoted to various disciplines in satisfiability research and aims to give the reader an impression of
 the state of the art of this research in the year 2000 It consists of a compilation of articles on this subject which have
 appeared or will appear in the periodicals The disciplines covered fall not entirely neatly into four categories complete

 series have published seminal works by leading logicians Many of the original books in the series have been unavailable for
 years but they are now in print once again This volume the twentieth publication in the Lecture Notes in Logic series
 contains the proceedings of the 2001 European Summer Meeting of the Association for Symbolic Logic held at the Vienna
 University of Technology Two long articles present accessible expositions on resolution theorem proving and the determinacy
 of long games The remaining articles cover separate research topics in many areas of mathematical logic including
 applications in computer science proof theory set theory model theory computability theory linguistics and aspects of

Lerner, Boris L. Altshuler, Vladimir I. Fal'ko, Thierry Giamarchi, 2002-07-31 The physics of strongly correlated fermions and bosons in a disordered environment and confined geometries is at the focus of intense experimental and theoretical research efforts. Advances in material technology and in low temperature techniques during the last few years led to the discoveries of new physical phenomena in atomic gases and a possible metal-insulator transition in two-dimensional high mobility electron structures. Situations where the electronic system is so dominated by interactions that the old concepts of a Fermi liquid do not necessarily make a good starting point are now routinely achieved. This is particularly true in the theory of low dimensional systems such as carbon nanotubes or in two dimensional electron gases in high mobility devices where the electrons can form a variety of new structures. In many of these systems disorder is an unavoidable complication and leads to a host of rich physical phenomena. This has pushed the forefront of fundamental research in condensed matter towards the edge where the interplay between many body correlations and quantum interference enhanced by disorder has become the key to the understanding of novel phenomena.
