Sustainability and Resilience in Energy, Food and Water Marko Keskinen, Suvi Sojamo, Olli Varis, 2020-03-10 This book looks at the ways that energy food and water help to create connections between sustainability and security The concept of security is in our current societies increasingly connected with sustainability which seeks to ensure that we as humans are able to live and prosper on this planet now and in the future The concepts of energy security food security and water security used separately or together manifest the burgeoning linkages between security and sustainability This book brings together

ten scientific articles that look at different aspects of security sustainability and resilience with an emphasis on energy food and or water in the context of Finland and Europe Together the articles portray a rich picture on the diverse linkages between both energy food and water and between security and sustainability In sum the articles and related preface conclude that ensuring sustainable security or secure sustainability requires systemic structured processes that link the policies and actors in these two important but still distant fields
