Hargreaves,2013-10-28 British and American commanders first used modern special forces in

support of conventional military operations during World War II. Since then, although special ops have featured prominently in popular culture and media coverage of wars, the academic study of irregular warfare has remained as elusive as the practitioners of special operations themselves. This book is the first comprehensive study of the development, application, and value of Anglo-American commando and special forces units during the Second World War. Special forces are intensively trained, specially selected military units performing unconventional and often high-risk missions. In this book, Andrew L. Hargreaves not only describes tactics and operations but also outlines the distinctions between commandos and special forces, traces their evolution during the war, explains how the Anglo-American alliance functioned in the creation and use of these units, looks at their command and control arrangements, evaluates their impact, and assesses their cost-effectiveness. The first real impetus for the creation of British specialist formations came in the desperate summer of 1940, when having been pushed out of Europe following defeat in France and the Low Countries, Britain began to turn to irregular forces in an effort to wrest back the strategic initiative from the enemy. The development of special forces by the United States was also a direct consequence of defeat. After Pearl Harbor, Hargreaves shows the Americans found themselves in much the same position as Britain had been in 1940: shocked, outnumbered, and conventionally defeated, they were unable to come to grips with the enemy on a large scale. By the end of the war, a variety of these units had overcome a multitude of evolutionary hurdles and made valuable contributions to practically every theater of operation. In describing how Britain and the United States worked independently and cooperatively to invent and put into practice a fundamentally new way of waging war, this book demonstrates the two nations' flexibility, adaptability, and ability to innovate during World War II.

Air power and warfare: the proceedings of the 8th Military History Symposium, United States Air Force Academy, 18-20 October 1978, **Nature at War** Thomas Robertson, Richard P. Tucker, Nicholas B. Breyfogle, Peter Mansoor, 2020-04-02. World War II was the largest and most destructive conflict in human history. It was an existential struggle that pitted irreconcilable political systems and ideologies against one another across the globe in a decade of violence unlike any other. There is little doubt today that the United States had to engage in the fighting, especially after the Japanese attack on Pearl Harbor on December 7, 1941. The conflict was, in the words of historians Allan Millett and Williamson Murray, a war to be won. As the world's largest industrial power, the United States put forth a supreme effort to produce the weapons, munitions, and military formations essential to achieving victory. When the war finally ended, the finale signaled by atomic mushroom clouds over Hiroshima and Nagasaki, upwards of 60 million people had perished in the inferno. Of course, the human toll represented only part of the devastation; global environments also suffered greatly. The growth and devastation of the Second World War significantly changed American landscapes as well. The war created or significantly expanded a number of industries put land to new uses, spurred urbanization, and left a legacy of pollution that would in time create a new term: Superfund site. *Air Corps News Letter*, 1967. *Strategic Planning for Coalition Warfare: 1943-1944* Maurice Matloff, Edwin Marion Snell, 1953.

Brown,2018-11-30 Through a reliance on nuclear weapons President Eisenhower hoped to provide a defense strategy that would allow the U S to maintain its security requirements without creating an economic burden This defense strategy known as the New Look benefited the U S Air Force with its focus on strategic nuclear weapons The U S also required European missile bases to deploy their intermediate range ballistic missiles while efforts continued to develop U S based intercontinental ballistic missiles Deploying such missiles to Europe required balancing regional European concerns with U S domestic security priorities In the wake of the Soviet Sputnik launch in 1957 the U S began to fear Soviet missile capabilities Using European missile bases would mitigate this domestic security issue but convincing NATO allies to base the missiles in their countries raised issues of sovereignty and weapons control and ran the risk of creating divisions in the NATO alliance
