International Library of Technology ,1909      Workflow Management Systems and Interoperability Asuman Dogac, Leonid Kalinichenko, Tamer Özsu, Amit Sheth, 2012-12-06 Workflow management systems WFMS are enjoying increasing popularity due to their ability to coordinate and streamline complex organizational processes within organizations of all sizes. Organizational processes are descriptions of an organization's activities engineered to fulfill its mission such as completing a business contract or satisfying a specific customer request. Gaining control of these processes allows an organization to reengineer and improve each process or adapt them to changing requirements. The goal of WFMSs is to manage these organizational processes and coordinate their execution. This was demonstrated in the first half of the 1990s by a significant increase in the number of commercial products, once estimated to be about 250 and the estimated market size in combined 2 billion in 1996. Ensuing maturity, product sales and services of about \$100 billion are demonstrated by consolidations during the last year. Ranging from mere e-mail based calendar tools and flow charting tools to very sophisticated integrated development environments for distributed enterprise wide applications and systems to support programming in the large, these products are finding an eager market and opening up important research and development opportunities. In spite of their early success in the marketplace, however, the current generation of systems can benefit from further research and development especially for increasingly complex and mission critical applications.      **100 Things to Know About Architecture** Louise O'Brien, 2023-01-31 Learn all about the world of architecture in only 100 words.
