Warner, 2012-12-06 Sponsored by the National Cancer Institute NIH *Lymphocyte Hybridomas and Their Products* S. A. Goodman, 1981 **Current Topics in Microbiology and Immunology** Fritz Melchers, Michael Potter, Noel Lawrence Warner, 1967 *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 *Superantigen Protocols* Teresa Krakauer, 2008-02-05 Leading researchers in the biological chemical and physical investigation of superantigens describe in step by step detail their best experimental techniques to assess the physical characteristics and biological effects of superantigens Their protocols range from those for investigating the interactions of superantigens with cellular receptors to those for the analysis of their immunological and biological effects including methods for using BIOcore to determine binding kinetics and establishing various lymphocyte cell culture systems There are also accounts of such methods as the RNase protection assay cytokine ELISA FACS analysis and cytokine production at the single cell level **Current Catalog** ,1988 First multi year cumulation covers six years 1965 70

Short-Term Test Systems for Detecting Carcinogens K.H. Norpoth, 2012-12-06 The varying cancer incidence from country to country and region to region suggests that environmental factors play a considerable role in the aetiology of cancer Whether these factors in the environment moderate the effect of carcinogenic chemicals or whether they might themselves be carcinogenic is not known at the present time What is known is that there are various chemicals both naturally occurring and man made which can induce cancer in man In the Western world estimates vary as to how much cancer is occupational in origin the figures range from 1% to 40% It is our feeling that probably about 10% of cancer has a direct occupational origin Nevertheless this number is considerable and it behoves us therefore to identify those chemicals which are carcinogenic and to reduce human exposure Recent work on the mode of action of carcinogenic chemicals suggests that the majority exert their effect through an activation step to give electrophilic metabolites Such metabolites have as a common feature the ability to react with cellular nucleophiles to give covalently bound products Such reaction will occur after carcinogen treatment of animals with nucleic acids particularly in target organs It is reaction with nucleic acids that provides the basis of a number of short term tests for carcinogens since the basic composition of DNA is similar in micro organisms and in human cells *Cumulated Index Medicus* ,1992 **Current Topics in Microbiology and Immunology** W. Arber, S. Falkow, W. Henle, P. H. Hofschneider, J. H. Humphrey, J. Klein, P. Koldovský, H. Koprowski, O. Maaløe, F. Melchers, R. Rott, H. G. Schweiger, L. Syrupek, P. K. Vogt, 2012-12-06 The study of the genetic regulation of immune response to natural multidentant immunogens was undertaken by the method of bidirectional selective breeding of High or Low antibody responder lines of mice Five Selections are described Selection I carried out for agglutinin responsiveness to sheep erythrocytes and pigeon erythrocytes alternated in each generation Selection II carried out for agglutinin responsiveness to sheep erythrocytes

repeated in each generation Selection III and Selection IV performed respectively for agglutinin response to flagellar or somatic antigens of *Salmonella typhimurium* and *Salmonella oranienburg* alternated in each generation Selection V performed for passive agglutinin response to bovine serum albumin and rabbit gamma globulin alternated in each generation In each Selection the character investigated is polygenic High and Low responder lines diverge progressively during the selective breeding The maximal interline separation selection limit is reached in the 7th 16th generations High and Low responder lines at selection limit are considered homozygous for the character submitted to selection Their variance is therefore only due to environmental effects The difference in agglutinin titre between High and Low lines is 220 fold in Selection I 103 fold in Selection II 90 fold in Selection III 85 fold in Selection IV and 275 fold in Selection V The partition of genetic and environmental variances in the foundation populations of the five Selections is established The proportion of genetic variance is 60% in Selection I 49% in Selection II 51% in Selection III 47% in Selection IV and 76% in Selection V

Literature Search National Library of Medicine (U.S.),1980 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), **Medical and Health Care Books and Serials in Print** ,1997 **Current Topics in Microbiology and Immunology** ,2012-12-06 *Tumor Antigenicity and Approaches to Tumor Immunotherapy* David W. Weiss,1980-02 This volume is not intended as review of the large literature on tumor antigenicity and efforts at tumor immunotherapy Its purpose rather is to present discursively an outline of the likely approaches to immunological intervention in neoplastic diseases which present themselves today in light of the probable antigenic properties of cancer cells References are cited only selectively in illustration of some of the major considerations to which allusion is made and of some of the supportive evidence No attempt is made at inclusiveness in the citation of concepts and findings If undue emphasis appears to be given to some aspects of the literature and only sparse documentation to others the grounds do not lie necessarily with a critical estimation of the extent or quality of reported work but rather with the bias of the writer who considers stress on some facets of the field more appropriate than on others for elaboration of his arguments The references brought in support of a given point are often intentionally varied including both reports of original work and reviews very recent observations and contributions that gave initial impetus to investigations in an attempt to exemplify the pertinent literature and reference is made both to data presented and to concepts advanced *Acta Biologica Academiae Scientiarum Hungaricae* ,1979 *Fundamentals of Immunology* O.G. Bier,W. Dias Da Silva,D. Goetze,I. Mota,2012-12-06 This textbook of basic and clinical immunology has been written primarily for medical and biology students who are receiving their first introduction to this fascinating field Although we have presumed some knowledge of basic biology particularly physiology and biochemistry our primary intent has not been to cover in depth the latest research findings Rather we have sought to lay a firm foundation for subsequent reading in the laboratory and clinical sciences internal medicine pediatrics microbiology serology physiology cell biology and genetics Hence the first part of the text presents the various components of basic

immunology while the second shows how these elements interact under both normal physiologic and pathologic conditions. To facilitate comprehension of the relationship between basic and clinical immunology we have introduced cross references throughout the book. A glossary of important terms has also been included. Selected references are provided with each chapter to guide the student to additional information on topics of special interest. Throughout the book we have attempted to convey to new students of immunology some of the excitement which the subject has long held for us. If we have succeeded the task of writing will have been worthwhile.
