Logic-Based Artificial Intelligence Jack Minker, 2012-12-06 The use of mathematical logic as a formalism for artificial intelligence was recognized by John McCarthy in 1959 in his paper on Programs with Common Sense In a series of papers in the 1960 s he expanded upon these ideas and continues to do so to this date It is now 41 years since the idea of using a formal mechanism for AI arose It is therefore appropriate to consider some of the research applications and implementations that have resulted from this idea In early 1995 John McCarthy suggested to me that we have a workshop on Logic Based Artificial Intelligence LBAI In June 1999 the Workshop on Logic Based Artificial Intelligence was held as a consequence of McCarthy s suggestion The workshop came about with the support of Ephraim Glinert of the National Science Foundation IIS 9S2013S the American Association for Artificial Intelligence who provided support for graduate students to attend and Joseph JaJa Director of the University of Maryland Institute for Advanced Computer Studies who provided both manpower and financial support and the Department of Computer Science We are grateful for their support This book consists of refereed papers based on presentations made at the Workshop Not all of the Workshop participants were able to contribute papers for the book The common theme of papers at the workshop and in this book is the use of logic as a formalism to solve problems in AI

Computational Intelligence - Volume I Hisao Ishibuchi, 2015-12-30 Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly growing research field including a wide variety of problem solving techniques inspired by nature Traditionally computational intelligence

consists of three major research areas Neural Networks Fuzzy Systems and Evolutionary Computation Neural networks are mathematical models inspired by brains Neural networks have massively parallel network structures with many neurons and weighted connections Whereas each neuron has a simple input output relation a neural network with many neurons can realize a highly non linear complicated mapping Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non linear mapping required in a particular application task Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language For example it is very difficult to mathematically define the meaning of cold in everyday conversations such as It is cold today and Can I have cold water The meaning of cold may be different in a different situation Even in the same situation a different person may have a different meaning Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language As a result fuzzy systems have been successfully applied to real world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF THEN rules Evolutionary computation includes various population based search algorithms inspired by evolution in nature Those algorithms usually have the following three mechanisms fitness evaluation to measure the quality of each solution selection to choose good solutions from the current population and variation operators to generate offspring from parents Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of objective functions For example simulation based fitness evaluation is often used in evolutionary design Subjective fitness evaluation by a human user is also often used in evolutionary art and music These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers

Dynamic Worlds Remo Pareschi, Bertram Fronhöfer, 2013-03-09 Reasoning is an integral part of intelligent systems in fields like databases logic programming robotics knowledge engineering human computer interfaces programming environments etc In reality any such system has to cope with a changing world and its dynamics Hence it is of great importance that reasoning must account for coping with change in order to be truly useful in practice The book comprises several contributions to current ways of approaching this problem On the one hand it surveys and synthesizes recent research work while on the other hand new research results are included Among the topics treated are logics for reasoning about actions and planning belief revision and the reconciliation of logically conflicting inputs resolving of conflicts by merging of knowledge and issues in the evolution in object oriented databases The book is aimed at the researcher and advanced student active in this field Machine Learning Ryszard Stanisław Michalski, Jaime G. Carbonell, Tom M. Mitchell, 1983 **Syntactic and Structural Pattern Recognition** Gabriel Ferrate, Theo Pavlidis, Alberto Sanfeliu, Horst Bunke, 2012-12-06 Thirty years ago pattern recognition was dominated by the learning machine concept that one could automate the process of going from the raw data to a classifier The derivation of numerical features from the input image

was not considered an important step One could present all possible features to a program which in turn could find which ones would be useful for pattern recognition In spite of significant improvements in statistical inference techniques progress was slow It became clear that feature derivation was a very complex process that could not be automated and that features could be symbolic as well as numerical Furthermore the spatial relationship amongst features might be important It appeared that pattern recognition might resemble language analysis since features could play the role of symbols strung together to form a word This led to the genesis of syntactic pattern recognition pioneered in the middle and late 1960 s by Russel Kirsch Robert Ledley Nararimhan and Allan Shaw However the thorough investigation of the area was left to King Sun Fu and his students who until his untimely death produced most of the significant papers in this area One of these papers syntactic recognition of fingerprints received the distinction of being selected as the best paper published that year in the IEEE Transaction on Computers Therefore syntactic pattern recognition has a long history of active research and has been used in industrial applications
