Non-deterministic Concurrent Logic Programming in Pandora Reem Bahgat,1993 This monograph is the first comprehensive study of the design application and implementation of Pandora a new parallel logic programming language Pandora combines stream and parallelism with don t know non determinism in a unified and efficient manner As a result it provides a programming paradigm of non deterministic concurrent communicating processes which opens up interesting application areas that cannot conveniently be expressed in existing logic programming languages The author describes the use of Pandora for constraint programming solving resource allocation problems heuristic search and distributed discrete event simulation The final chapters describe in detail the implementation of Pandora on single as well as multi processor architectures The volume is aimed at the community of logic programming students and professionals as well as researchers and professionals in artificial intelligence It will also be of great interest to researchers in programming language design and parallel processing **Australian Computer Journal** ,1989 **Computer Vision Systems** Allen Hanson,1978-01-01 Computer Vision Systems is a collection of papers presented at the Workshop on Computer Vision Systems held at the University of Massachusetts in Amherst Massachusetts on June 1 3 1977 Contributors discuss the breadth of problems that must be taken into account in the development of general computer vision systems Topics covered include the application of system engineering techniques to the design of artificial intelligence systems representation and segmentation of natural scenes and pragmatic aspects of machine vision Psychophysical measures of representation and interpretation are also considered This monograph is divided into four sections Issues and Research Strategies Segmentation Theory and

Psychology and Systems The first chapter explores the problem of recovering the intrinsic characteristics of scenes from images along with its implications for machine and human vision The discussion then turns to special purpose low level vision systems that can be flexibly reconfigured as the need arises design development and implementation of large systems from the human engineering point of view and representation of visual information The next section examines hierarchical relaxation for waveform parsing the topology and semantics of intensity arrays and visual images as spatial representations in active memory The use of edge cues to recognize real world objects is also analyzed This text will be a useful resource for systems designers computer engineers and scientists as well as psychologists Intelligent Robots and Computer Vision VIII ,1990 Information-theoretic Incompleteness Gregory J Chaitin,1992-08-24 In this mathematical autobiography Gregory Chaitin presents a technical survey of his work and a nontechnical discussion of its significance The volume is an essential companion to the earlier collection of Chaitin s papers Information Randomness and Incompleteness also published by World Scientific The technical survey contains many new results including a detailed discussion of LISP program size and new versions of Chaitin s most fundamental information theoretic incompleteness theorems The nontechnical part includes the lecture given by Chaitin in G del s classroom at the University of Vienna a transcript of a BBC TV interview and articles from New Scientist La Recherche and the Mathematical Intelligencer **AI Magazine** ,1999 *Intelligent Robots and Computer Vision VIII* David Paul Casasent,1990 *Intelligent Robots and Computer Vision* ,1990
