Exploring Space Rodney P. Carlisle, 2005 Offers coverage of human explorations into space from 19th century fantasy to 20th century achievement and the future of space exploration in the 21st century giving information about the current state of exploration in the final frontier Apollo Mission Control Manfred "Dutch" von Ehrenfried, 2018-06-21 This book describes the history of this now iconic room which represents America's space program during the Gemini Apollo Skylab Apollo Soyuz and early Space Shuttle eras It is now a National Historic Landmark and is being restored to a level which represents the day the flight control teams walked out after the last lunar landing missions The book is dedicated to the estimated 3 000 men and women who supported the flights and tells the story from their perspective It describes the rooms of people supporting this control center those rooms of engineers analysts and scientists most people never knew about Some called it a shrine and some called it a cathedral Now it will be restored to its former glory and soon thousands will be able to view the place where America flew to the moon *The Sky Is Not the Limit* Alessandro Gili, 2024-06-07 Space is a contested domain for its very nature and today it is evidently becoming an increasingly important enabler of economic and military power An increasing number of actors infrastructures and technologies deployed in space also raises concerns for safety and security especially in cyberspace Many countries are striving to achieve space capabilities and autonomous access to space and this is having a tremendous geopolitical impact especially since space is emerging as an increasingly critical military and strategic domain The development of the new space economy which is increasingly involving the private sector and many industrial actors and services will also be a game changer for the international economy The space race likewise

implies disruptive technologies that could contribute massively to the energy and digital transitions accelerating solutions that could benefit humanity A new international governance system for space is therefore needed urgently considering that the current rules are no longer able to respond to a sector evolving at such a rapid pace Which actors are leading the race Which economic sectors could benefit the most and what could the new space economy mean for the world How is space emerging as a military domain against a backdrop of increasing international tensions What would a new system of global governance for space look like

Soviet and Russian Lunar Exploration Brian Harvey, 2007-08-17 When in July 1969 the Americans decisively beat the Soviet Union in the race to put an astronaut on the moon this event had profound historical scientific and political implications This book tells the story of the Soviet and Russian lunar programme from its origins to the reconsideration of a lunar programme in the present day federal Russian space programme Following Sputnik the first Soviet lunar flights achieved the key goals of hitting circling and photographing the moon in 1959 The Soviet Union planned to achieve the biggest prize of them all the first person to land on the moon and built all the key spaceships required to do so such as a lunar orbiter and lander Brian Harvey describes the techniques devised by the USSR for lunar landing from the LK lunar module to the LOK lunar orbiter and tested versions in Earth orbit He asks whether these systems would have worked and examining how well they were tested concludes that they would have the Soviet Union lost the moon race for political not technical reasons Designs for moon bases were even drawn up In the end the Soviet Union ran an impressive series of robotic missions from 1968 to 1976 to circle the moon map the far side conduct scientific observations from orbit recover samples and rove over the surface The scientific haul from these missions is surveyed what was actually learned about the moon its rocks and the lunar environment that will be useful for the present plans by the United States to return to the moon and for other countries such as India and China to conduct their own lunar exploration The book opens in Surgut Siberia in August 1976 with a largely forgotten event the return to Earth after a three day journey from the moon under a single parachute of the tiny Luna 24 cabin with a core sample drilled deep into the Sea of

Crises a remarkable scientific and engineering achievement It ends with an examination of projected missions from plans to explore the far side and set up lunar observatories to the Luna Glob explorer of the 1990s There is also discussion of lunar tourism using a modernized version of the Zond spacecraft which flew around the moon from 1968 to 1970 Asian Space Race: Rhetoric or Reality? Ajey Lele, 2012-10-20 This book explores the character and contours of the Asian Space Powers At present Asian states like China Japan and India are found investing in space technologies with analogous social and scientific and probably with divergent military intents Other Asian states like Israel South Korea and Malaysia are also making investments in the space arena States like Iran and North Korea are faulted for using space launches as a demonstrative tool to achieve strategic objectives This work examines this entire maze of activities to unearth where these states are making these investments to accomplish their state specific goal or are they also trying to surpass each other by engaging in competition Explaining why and how these states are making investments towards achieving their socio economic and strategic mandate this book infers that the possibility of Asian Space Race exists but is presently fairly diminutive **Cold War Space Sleuths** Dominic Phelan, 2012-11-28 Space Sleuths of the Cold War relates for the first time the inside story of the amateur spies who monitored the Soviet space program during the Cold War It is written by many of those space sleuths themselves and chronicles the key moments in their discovery of hidden history This book shows that dedicated observers were often better than professionals at interpreting that information coming out of the USSR during the dark days of the Cold War This book takes a unique approach to the history of Soviet spaceflight looking at the personal stories of some of the researchers as well as the space secrets the Soviets tried to keep hidden The fascinating account often reads like a Cold War espionage novel Space Sleuths of the Cold War includes an impressive list of contributors such as Editor Dominic Phelan giving an overall history of the Cold War hunt for Soviet space secrets Space writer Brian Harvey reveals his own personal search through official Soviet radio and magazines to find out what they were and weren't revealing to the outside world at the height of the space race Sven Grahm from Sweden details his own 40 year quest to understand what was happening on the other side of the Iron Curtain Professional American historian Asif Siddiqi explores his own adventures in the once secret Russian archives often seeing documents never before read by Westerners Dutch cosmonaut researcher Bert Vis provides an inside account of the Yuri Gagarin training center in Moscow Belgian researcher Bart Hendrickx's details his important translation of the 1960s diaries of cosmonaut team leader General Kamanin Pioneer space sleuth James Oberg's shares his memories of his own notable scoops Paris based writer Christian Lardier recounts the efforts of French space sleuths whose work was frequently overlooked in the USA and Britain because of the language barrier Voices of the Soviet Space Program S. Gerovitch, 2014-12-16 In this remarkable oral history Slava Gerovitch presents interviews with the men and women who witnessed Soviet space efforts firsthand Rather than comprising a master narrative these fascinating and varied accounts bring to light the often divergent perspectives experiences and institutional cultures that defined the Soviet space
