Mobile Data Management Ming-Syan Chen,2003-01-07 This book constitutes the refereed proceedings of the 4th International Conference on Mobile Data Management MDM 2003 held in Melbourne Australia in January 2003 The 21 revised full papers and 15 revised short papers presented were carefully reviewed and selected from 87 submissions The papers are organized in topical sections on storage management location tracking information management location aware services context aware services resource discovery location management storage management and query processing and context aware information services **Data Management for Mobile Computing** Evaggelia Pitoura,George Samaras,1998 Universal access and management of information has been one of the driving forces in the evolution of computer technology Central computing gave the ability to perform large and complex computations and advanced information manipulation Advances in networking connected computers together and led to distributed computing Web technology and the Internet went even further to provide hyper linked information access and global computing However restricting access stations to physical locations limits the boundary of the vision The real global network can be achieved only via the ability to compute and access information from anywhere and anytime This is the fundamental wish that motivates mobile computing This evolution is the cumulative result of both hardware and software advances at various levels motivated by tangible application needs Infrastructure research on communications and networking is essential for realizing wireless systems Equally important is the design and implementation of data management applications for these systems a task directly affected by the characteristics of the wireless medium and the resulting mobility of data resources and computation

Although a relatively new area mobile data management has provoked a proliferation of research efforts motivated both by a great market potential and by many challenging research problems The focus of Data Management for Mobile Computing is on the impact of mobile computing on data management beyond the networking level The purpose is to provide a thorough and cohesive overview of recent advances in wireless and mobile data management The book is written with a critical attitude This volume probes the new issues introduced by wireless and mobile access to data and their conceptual and practical consequences Data Management for Mobile Computing provides a single source for researchers and practitioners who want to keep abreast of the latest innovations in the field It can also serve as a textbook for an advanced course on mobile computing or as a companion text for a variety of courses including courses on distributed systems database management transaction management operating or file systems information retrieval or dissemination and web computing
