Cyberlines 2.0 Donna Gibbs, Kerri-Lee Krause, 2006 As one of the most significant and original cross-cultural analyses of the distinctive language and culture of the internet, this book offers an exciting and original critique of the futuristic synthesis of the linguistic, visual, spatial and digital dimensions which characterise the world of the internet. Recognising that information technology and languages and cultures of the internet continue to expand almost exponentially, the authors provide a timely analysis of the themes and key concepts necessary for understanding the new languages of the internet. The book is organised around four interrelated themes: The languages of cyberspace, New literacies, Gaming and socialising, and Culture and communities in cyberspace. The authors build on the new tech discourses and tech cultures of the internet. Internationally acclaimed authors examine the cultural dimensions of cyberlanguage, screen reading and critical literacy, negotiating the web literacy and technology pedagogy of education, tainment, children and CD Rom technology, identity and mobile phones, cyberself and identity on the internet and the new literacies of blogging and SMS messaging. This insightful and provocative study demonstrates the profound effects of information technology on the evolving global cultures and subcultures caused by these new forms of thinking, perceiving and communication.

Wired Youth Ilan Talmud, Gustavo Mesch, 2010-04-05 The debate on the social impact of information and communication technologies is particularly important for the study of adolescent life because through their close association with friends and peers, adolescents develop life expectations, school aspirations, world views and behaviors. This book presents an up-to-date review of the literature on youth sociability, relationship formation and online communication, examining the way young people use the internet to construct or maintain their interpersonal relationships. Using a social network perspective, the book systematically explores the various effects of internet access and use on adolescents' involvement in social, leisure and extracurricular activities, evaluating the arguments that suggest the internet is displacing other forms of social ties. The core of the book investigates the motivations for online relationship formation and the use of online communication for relationship maintenance. The final part of the book focuses on the consequences, both positive and negative, of the use of online communication, such as increased social capital and online bullying. **Wired Youth** is ideal for undergraduate and graduate students of adolescent psychology, youth studies, media studies and the psychology and sociology of interpersonal relationships
