

The mobile telephone

In only a quarter of a century of life, the mobile telephone has popularised in the entire world. The current models are small, light and with dozens of features: games, MP3 music playing, electronic mail, SMS, electronic diary or agenda, digital photography, internet browsing, GPS and even digital television.

FUNCTIONING

1 THE CALL

The local antenna identifies who is calling and the number, and sends the information to the main station.

2 THE MAIN STATION

It has a database with all the numbers of mobile telephones, and the calls to which they are located.

INTERNATIONAL

As in stationary telephones, international communications are made with the aid of satellites.

IN MOTION

The calls detect the displacement of the mobile telephones as the signal bounces in one and increases in another. This allows maintaining communication, even while in motion and at fast speeds.

3 THE CONNECTION

The local antenna establishes the communication with the required mobile telephone.

EVOLUTION

Since its appearance in 1983, mobile telephones have been reducing their size and incorporating new applications.

SMART PHONES

These new telephones incorporate all the capabilities of a last generation computer.
