Mobile Working Hydraulic System Dynamics Mikael Axin, 2015-09-07 This thesis deals with innovative working hydraulic systems for mobile machines Flow control systems are studied as an alternative to load sensing The fundamental difference is that the pump is controlled based on the operator's command signals rather than feedback signals from the loads This control approach enables higher energy efficiency and there is no load pressure feedback causing stability issues Experimental results show a reduced pump pressure margin and energy saving potential for a wheel loader application The damping contribution from the inlet and outlet orifice in directional valves is studied Design rules are developed and verified by experiments A novel system architecture is proposed where flow control load sensing and open centre are merged into a generalized system description The proposed system is configurable and the operator can realize the characteristics of any of the standard systems without compromising energy efficiency This can be done non discretely on the fly Experiments show that it is possible to avoid unnecessary energy losses while improving system response and increasing stability margins compared to load sensing Static and dynamic differences between different control modes are also demonstrated experimentally

Mobile Virtual Work J. H. Erik Andriessen, Matti Vartiainen, 2005-09-23 Dear Reader This is a book about mobile virtual work It aims at clarifying the

basic concepts and showing present practices and future challenges The roots of the book are in the collaboration of few European practitioners and searchers who met each other under the umbrella of the Swedish SALTSA programme see next page in January 2002 in Stockholm The group was first called ICT Mobility and Work Organisation but redefined itself quickly as Mobile Virtual Cooperative Work group The change of the name reflects the development of reasoning in the group We could not find much material on mobile work certainly not systematic studies though a growing interest in mobile technologies and services could be found Practices of telework and virtual organizations were better known but we were convinced that the combination with mobile work was so thing different and new Our main target became to understand what it was all about The next step was an expert meeting in October 2004 at R n s Castle again in Sweden A wider group of experts was invited to present their views on mobile virtual work and ideas about book chapters from different perspectives of working life Some of the expertise could be found through the network of the AMI Work family created by the New Working En ronments unit of the European Commission s Information Society Dir torate General Also close collaboration was developed with the related MOSAIC program
