Mobility And Transportation In The Elderly:

Mobility and Transportation in the Elderly K. Warner Schaie, PhD, Martin Pietrucha, PhD, 2000-03-10 This comprehensive volume examines the gradual reduction of mobility in the elderly. The authors first review the physiological and psychological changes that occur as we age and go on to illustrate how this gradual decrease in adequate mobility can lead to an increase in automotive accidents. They also review the limitations that mass transportation systems and driving individual vehicles present for the elderly and discuss different assistive devices that have been and should be implemented to help improve mobility. Each chapter ends with insightful commentaries by specialists in the gerontology field. This book is a must read for gerontologists as well as policy makers and educators on courses in organizational structures of social policy.

Introduction to Senior Transportation Helen K. Kerschner, Nina M. Silverstein, 2018-01-31 Introduction to Senior Transportation focuses on an issue that is a growing concern: the community mobility needs of older adults. Surpassing the coverage available in existing gerontology textbooks, it enables the reader to understand and appreciate the challenges faced by older adults as they make the transition from driving to using transportation options many of which were not designed to meet their particular needs. It considers the physical and cognitive limitations of older adult passengers, the family of transportation services, the challenges providers face in meeting the assistance and support needs of senior passengers, and the transportation methods that do and do not currently meet the needs and wants of senior passengers. This textbook addresses the educational and professional development needs of faculty, students, and practitioners working in the fields of aging, aging services, and transportation. The book has been class tested and features innovative practical learning tools that appeal to students and practitioners. It complements any introductory course in gerontology, human development, and aging, or human factors, and will enhance the curriculum of programs in the social behavioral sciences as well as traffic safety, transit engineering, and community planning.
