## **Model Research 1915 1958 Volume 1:**

**NASA Scientific and Technical Publications** ,1987      **Into the Black** Peter J. Westwick,2008-10-01 divIn the decades since the mid 1970s the Jet Propulsion Laboratory in Pasadena California has led the quest to explore the farthest reaches of the solar system JPL spacecraft Voyager Magellan Galileo the Mars rovers and others have brought the planets into close view JPL satellites and instruments also shed new light on the structure and dynamics of earth itself while their orbiting observatories opened new vistas on the cosmos This comprehensive book recounts the extraordinary story of the lab s accomplishments failures and evolution from 1976 to the present day This history of JPL encompasses far more than the story of the events and individuals that have shaped the institution It also engages wider questions about relations between civilian and military space programs the place of science and technology in American politics and the impact of the work at JPL on the way we imagine the place of humankind in the universe DIV      **Internet Alley** Paul E. Ceruzzi,2008 How government military contractors and high tech firms transformed an unincorporated suburban crossroads into the center of the world s Internet management and governance      **Scientific and Technical Aerospace Reports** ,1985      **In Sputnik's Shadow** Zuoyue Wang,2009 In Sputnik s Shadow traces the rise and fall of the President s Science Advisory Committee from its ascendance under Eisenhower to its demise during the Nixon years Zuoyue Wang examines key turning points during the twentieth century including the beginning of the Cold War the debates over nuclear weapons the Sputnik crisis in 1957 the struggle over the Vietnam War and the eventual end of the Cold War showing how the involvement of scientists in executive policymaking evolved over time and brings new insights to the intellectual social and cultural histories of the era      Atmospheric Flight in the Twentieth Century P. Galison,A. Roland,2013-03-07 All technologies differ from one another They are as varied as humanity s interaction with the physical world Even people attempting to do the same thing produce multiple technologies For example John H White discovered more than 1 1000 patents in the 19th century for locomotive smokestacks Yet all technologies are processes by which humans seek to control their physical environment and bend nature to their purposes All technologies are alike The tension between likeness and difference runs through this collection of papers All focus on atmospheric flight a twentieth century phenomenon But they approach the topic from different disciplinary perspectives They ask disparate questions And they work from distinct agendas Collectively they help to explain what is different about aviation how it differs from other technologies and how flight itself has varied from one time and place to another The importance of this topic is manifest Flight is one of the defining technologies of the twentieth century Jay David Bolter argues in Turing s Man that certain technologies in certain ages have had the power not only to transform society but also to shape the way in which people understand their relationship with the physical world A defining technology says Bolter resembles a magnifying glass which collects and focuses seemingly disparate ideas in a culture into one bright sometimes piercing ray 2 Flight has done that for the twentieth century      Innovation and the Development of

Flight Roger D. Launius, 1999 Perhaps no technological development in the century has more fundamentally transformed human life than the airplane and its support apparatus The nature of flight and the activities that it has engendered throughout the world makes the development of aviation technology an important area of investigation Why did aeronautical technology take the shape it did Which individuals and organizations were involved in driving it What factors influenced particular choices of technologies to be used More importantly how has innovation affected this technology Innovation and the Development of Flight a first strike at the new aviation history represents a significant transformation of the field by relating the subject to larger issues of society politics and culture taking a more sophisticated view of the technology that few historians have previously attempted This volume moves beyond a focus on the artifact to emphasize the broader role of the airplane and more importantly the entire technological system This suggests that many unanswered questions are present in the development of modern aviation and that inquisitive historians seek to know the relationships of technological systems to the human mind Some of the subjects discussed are early aeronautical innovation and government patronage the evolution of relationships among airports cities and industry the relationship of engine development to the entire aviation industry the Department of Commerce's influence on light plane development pressure in the Air Force for the development of jet engines and lessons of the National Aerospace Plane Program Aviation historians and historians of technology will find Innovation and the Development of Flight a valuable examination of aeronautical innovation providing foundations for continued explorations of this field

*Crossed Wires* Dan Schiller, 2023-02-17 A sweeping revisionist historical analysis of telecommunications networks from the dawn of the republic to the 21st century Telecommunications networks are vast intricate hugely costly systems for exchanging messages and information within cities and across continents From the Post Office and the telegraph to today's internet these networks have sown domestic division while also acting as sources of international power In *Crossed Wires* Dan Schiller who has conducted archival research on US telecommunications for more than forty years recovers the extraordinary social history of the major network systems of the United States Drawing on arrays of archival documents and secondary sources Schiller reveals that this history has been shaped by sharp social and political conflict and is embedded in the larger history of an expansionary US political economy Schiller argues that networks have enabled US imperialism through a recurrent American system of cross border communications Three other key findings wind through the book First business users of networks more than carriers and certainly more than residential users have repeatedly determined how telecommunications systems have developed Second despite their current importance for virtually every sphere of social life networks have been consecrated above all to aiding the circulation of commodities Finally although the preferences of

executives and officials have broadly determined outcomes these elites have repeatedly had to contend against the ideas and organizations of workers social movement activists and other reformers This authoritative and comprehensive revisionist history of US telecommunications argues that not technology but a dominative and contested political economy drove the evolution of this critical industry

*Space, Time, and Aliens* Steven J. Dick, 2020-05-11 In this comprehensive and interdisciplinary volume former NASA Chief Historian Steven Dick reflects on the exploration of space astrobiology and its implications cosmic evolution astronomical institutions discovering and classifying the cosmos and the philosophy of astronomy The unifying theme of the book is the connection between cosmos and culture or what Carl Sagan many years ago called the cosmic connection As both an astronomer and historian of science Dr Dick has been both a witness to and a participant in many of the astronomical events of the last half century This collection of papers presents his reflections over the last forty years in a way accessible to historians philosophers and scientists alike From the search for alien life to ongoing space exploration efforts readers will find this volume full of engaging topics relevant to science society and our collective future on planet Earth and beyond

**The Human Factor** John A. S. Pitts, 1985

**Expanding the Envelope** Michael H. Gorn, 2014-10-17 Expanding the Envelope is the first book to explore the full panorama of flight research history from the earliest attempts by such nineteenth century practitioners as England's Sir George Cayley who tested his kites and gliders by subjecting them to experimental flight to the cutting edge aeronautical research conducted by the NACA and NASA Michael H Gorn explores the vital human aspect of the history of flight research including such well known figures as James H Doolittle Chuck Yeager and A Scott Crossfield as well as the less heralded engineers pilots and scientists who also had the Right Stuff While the individuals in the cockpit often receive the lion's share of the public's attention Expanding the Envelope shows flight research to be a collaborative engineering activity one in which the pilot participates as just one of many team members Here is more than a century of flight research from well before the creation of NACA to its rapid transformation under NASA Gorn gives a behind the scenes look at the development of groundbreaking vehicles such as the X-1 the D-558 and the X-15 which demonstrated manned flight at speeds up to Mach 6.7 and as high as the edge of space
