**Diagnoses** Ilana Löwy, 2018-04-19 Since the late nineteenth century medicine has sought to foster the birth of healthy children by attending to the bodies of pregnant women through what we have come to call prenatal care Women and not their unborn children were the initial focus of that medical attention but prenatal diagnosis in its present form which couples scrutiny of the fetus with the option to terminate pregnancy came into being in the early 1970s Tangled Diagnoses examines the multiple consequences of the widespread diffusion of this medical innovation Prenatal testing Ilana Löwy argues has become mainly a risk management technology the goal of which is to prevent inborn impairments ideally through the development of efficient therapies but in practice mainly through the prevention of the birth of children with such impairments Using scholarship interviews and direct observation in France and Brazil of two groups of professionals who

play an especially important role in the production of knowledge about fetal development fetopathologists and clinical geneticists to expose the real life dilemmas prenatal testing creates this book will be of interest to anyone concerned with the sociopolitical conditions of biomedical innovation the politics of women s bodies disability and the ethics of modern medicine

**The Ethics of Consent and Choice in Prenatal Screening** Eleanor Miligan,2011-01-18 Increasingly notions of individual autonomy personal choice and preference have become woven into our reproductive expectations With respect to prenatal screening the choices sought offered or denied are shaped and interpreted through a range of social personal institutional and philosophical lenses While prenatal screening seeks to promote parental choice and early intervention for the most part the genetic anomalies commonly targeted are inherently unfixable Frequently the only further intervention on offer is selective termination Hence the practice of prenatal screening raises complex ethical questions forcing judgement on the desirability or undesirability of certain traits in our future offspring This book explores the numerous factors that shape how such ethical choices are interpreted from the perspective of individual mothers and health care providers and considers the impact of these factors on personal autonomy and consent to prenatal screening

**Imperfect Pregnancies** Ilana Löwy,2017-12-01 How has prenatal testing once offered only for high risk pregnancies become standard medical care for pregnant women today In the 1960s thanks to the development of prenatal diagnosis medicine found a new object of study the living fetus At first prenatal testing was proposed only to women at a high risk of giving birth to an impaired child But in the following decades such testing has become routine In Imperfect Pregnancies Ilana L wy argues that the generalization of prenatal diagnosis has radically changed the experience of pregnancy for tens of millions of women worldwide Although most women are reassured that their future child is developing well others face a stressful period of waiting for results uncertain prognosis and difficult decisions L wy follows the rise of biomedical technologies that made prenatal diagnosis possible and investigates the institutional sociocultural economic legal and political consequences of their widespread diffusion Because prenatal diagnosis is linked to the contentious issue of selective termination of pregnancy for a fetal anomaly debates on this topic have largely centered on the rejection of human imperfection and the notion that we are now perched on a slippery slope that will lead to new eugenics Imperfect Pregnancies tells a more complicated story emphasizing that there is no single standardized way to scrutinize the fetus but there are a great number of historically conditioned and situated approaches This book will interest students scholars health professionals administrators and activists interested in issues surrounding new medical technologies screening risk management pregnancy disability and the history and social politics of women s bodies

**Publishers' Trade List Annual, 1999** R R Bowker Publishing,Bowker,1999-09 **Understanding Reproduction in Social Contexts** Caitlin Killian,2025-06-12 In today s post Roe world U S maternal mortality is on the rise and laws regarding contraception involuntary sterilization access to reproductive health services and criminalization of people who are gestating are changing by the minute Using a reproductive justice framework Understanding Reproduction in

Social Contexts walks students through the social landscape around reproduction through the life course. Chapters by cutting edge reproductive scholars, practitioners and advocates address the social control of fertility and pregnancy, the promises and perils of assisted reproductive technologies, experiences of pregnancy, miscarriage, abortion and birth, and how individuals make sense of and respond to the cultural, social and political forces that condition their reproductive lives. The book takes an intersectional approach and considers how gender, sexuality, fatness, disability, class, race and immigration status impact both an individual's health and the healthcare they receive. The inclusion of timely topics such as increased legal limitations on abortion, transpeople and reproduction, and new developments in assisted reproduction and family formation speaks to the current generation of students. An essential text for undergraduate and graduate courses on families, gender, public health, reproduction and sexuality. *Women studies abstracts*, 1998. Governing Societies: Political Perspectives On Domestic And International Rule Dean, Mitchell, 2007-06-01. What structures of power are involved in governing societies and how are they connected? How is the liberal idea of governing through freedom linked to the increasing control of marginalised populations? Have we reached the end of history in which governing largely concerns self governing individuals, networks and communities? Should we dispense with the container view of society and contemplate the death of the social? Today many people in academia, politics and business question the idea of being able to govern society. The nation state and sovereign government are displaced by globalization and individualization. Mitchell Dean focuses on governing societies as a distinctive project that continues to define political life today. The book offers a critical analysis of contemporary liberal approaches to governing societies both in domestic and international affairs. *Governing Societies* provides an overview of current perspectives and theories and examines recent transformations in techniques and rationalities of rule. It presents a new argument for the importance and transformation of sovereignty and powers of life and death and how they are integral to governing liberal democratic societies. The book is key reading for undergraduate and postgraduate students of sociology and politics as well as researchers and academics. *Gendered Bodies* Judith Lorber, Lisa Jean Moore, 2007. For centuries the biological sciences have dissected, measured and probed the human body as a product of nature. But from a feminist perspective the human body is a social production. Human bodies are shaped and controlled by the norms and expectations of gendered social orders intersected by racial, class, religious and age norms and expectations. The result is a gendered body produced for a gendered social world. In this concise text with readings designed for undergraduate students, Lorber and Moore present feminist contributions to social and cultural studies of the human body, showing the construction of gendered bodies in different contexts. The authors argue that the ideology of the perfect body is a powerful means of social control for girls and boys as well as women and men. The authors show how children's bodies are gendered through games and sports and shaped and modified throughout adulthood to meet social expectations. Each chapter includes a list of key concepts, three readings, recommended books and articles and Internet sources. For the instructor the book includes class exercises and a list

of films with somatic themes     The Troubled Helix Theresa Marteau, Martin Richards, 1996 This wide ranging and compelling account surveys the exciting opportunities and difficult problems which arise from the new human genetics The availability of increasingly sophisticated information on our genetic make up presents individuals and society as a whole with difficult decisions Although it is hoped that these advances will ultimately lead the way to the effective treatment and screening for all diseases with a genetic component at present many individuals are condemned to a life sentence in the knowledge that they have or will develop an incurable genetic disease     **Environmental Health Perspectives** ,1993

The Faces of Intellectual Disability Licia Carlson, 2010 The Faces of Intellectual Disability challenges current thinking about cognitive impairment in order to come to terms with what it means to treat people with intellectual disabilities in an ethical manner As she embraces the task of reassessing philosophical views of intellectual disability Licia Carlson shows how we can affirm the dignity and worth of intellectually disabled people by dropping comparisons to nonhuman animals and confronting fears and discomforts about mental impairment Carlson presents a complex history of ideas and notions about cognitive impairment the treatment of intellectually disabled people and social and cultural reactions to them Sensitive and clearly argued this book offers significant new thinking on recent trends in disability studies and philosophy     Towards 2030: Sustainable Development Goal 3: Good Health and Wellbeing. Chattoo, Chimaraoke Izugbara, Andrzej Klimczuk, Magdalena Klimczuk-Kochańska, Piotr Toczyski, Ashwani Kumar, Rubal Kanozia, Grzegorz Piotr Gawron, Ahmad Ozair, 2025-08-26 Building on the Millennium Development Goals the UN Sustainable Development Goals are the cornerstone of the 2030 Agenda for Sustainable Development billed by the UN as An Agenda of unprecedented scope and significance The seventeen ambitious goals which are intended to be reached by 2030 are conceived as integrated indivisible and as balancing the economic social and environmental dimensions of sustainable development They are organized around five core pillars People ending poverty and hunger and ensuring that all human beings can lead fulfilling lives in a healthy and dignified environment Planet protecting the environment while ensuring sustainable use and management of natural resources Prosperity ensuring environmentally sustainable economic growth mutual prosperity and decent work for all Peace building societies that are peaceful just and inclusive and in which human rights and gender equality are respected Partnership strengthening global solidarity to address inequalities within and between countries by focusing on the needs of the most vulnerable This Research Topic addresses third Sustainable Development Goal which is to ensure healthy lives and promote wellbeing for all at all ages Progress toward this goal is measured by a number of individual targets and indicators As highlighted in the UN s most recent SDG progress report the COVID 19 pandemic has heavily impacted progress toward this goal Prior to the pandemic there had been improvements in maternal child health immunization coverage suicide rates and reductions in the incidence of communicable diseases and mortality rates from non communicable diseases The pandemic threatens to reverse or stall much of this progress As of June

2021 the global death toll from COVID 19 stood at 3.7 million with manifold wider ramifications of the disease. Ninety per cent of countries are still reporting one or more disruptions to essential health services and available data indicates that the pandemic has shortened life expectancy. The pandemic has also severely impacted mental health and increased waiting times for elective health services. At the same time it has exacerbated inequalities at the national and international levels including access to vaccines. In emerging from the pandemic and mitigating its effects, the UN has placed emphasis on expanding universal health coverage and multisectoral coordination for health emergency preparedness as well as improving demographic and epidemiological data. This Research Topic will address the third Sustainable Development Goal from a sociological specific perspective. It will focus on how social stratification, geographical location and culture impact communities' health but also on groups specific health problems, availability, understanding and reception of medications and treatment and the functioning of primary health care as a service aiming to influence and inform policymakers on the development of equal public health policies. A specific focus will be dedicated to how disparities in gaining access to health care reproduce important social inequalities in wellbeing and quality of life. Due to the COVID 19 pandemic, unprecedented health, economic and social challenges are threatening lives and livelihoods, making the attainment of SDGs much more onerous. This call invites contributions in the form of studies, reviews and opinion articles from the experts to provide sustainable solutions to achieve SDGs. This Research Topic welcomes papers that will provide both theoretical and empirical findings. Potential issues include but are not limited to: Transformations of social determinants of health including lifestyles and environments; Health inequalities and interventions towards their reduction; Development of demographic and epidemiological data collecting and processing; Advances in the fields of health emergency preparedness and access to universal health coverage; Good health and wellbeing through access to clean and green agriculture; Improving crop productivity on limited land in the era of climate change and COVID 19 pandemic; Application of sustainable practices in agriculture and food sectors; Public health and health sector innovations during the pandemic and for the post pandemic period; Tensions between national and international health policies in response to global health challenges; Role of experts in making law and public policies related to the COVID 19 pandemic e.g. response and recovery plans, programs, strategies and funds; Innovative co design, co creation and co production schemes based on diversity of policy ideas in the environmental policy and health policy; Disruptions and challenges for integrated public policies and programs on social, environmental and health issues related to delivering social health and care services; Opportunities, criticism and ethical controversies related to digital social innovation e health, plant based innovation, food innovation, AI, ICT and 3D solutions, social and service robotics, smart environments, gerontechnology and welfare technology.
