Preschool IQ Sarah H. Broman, Paul L. Nichols, Wallace A. Kennedy, 2017-09-13 Originally published in 1975 this volume reports a multidisciplinary longitudinal study of the precursors of intelligence as measured by Stanford Binet IQ scores of 4 year old children Over 26 000 children more than 12 000 whites and 14 000 blacks were followed from the prenatal period and 169 prenatal and developmental variables were examined in relation to preschool IQ scores Considered are the degree to which events during pregnancy and delivery physical and psychomotor development in infancy and childhood and certain major family characteristics were related to IQ scores The large heterogeneous sample of children studied prospectively and the wide range of biological and social variables investigated made this work of major importance at the time The level of maternal education and the socioeconomic status of the family were major contributors to explained variance in IQ and had larger effects among whites than among blacks Other findings relate low IQ at age 4 to delayed motor and mental development in infancy Many other factors thought to affect IQ scores both individually and in combination are reported to make this a work of importance to all concerned with the neurological and mental development of the child

Infancy to Early Childhood Robert N. Emde, John K. Hewitt, 2001-04-19 Behavioral genetics is a fast growing multidisciplinary field which attempts to explain the influence of genetic and environmental factors on behavior through the lifespan The preferred investigative technique for teasing out the differences between genetics and the environment is the longitudinal twin study This book is the first complete publication from the MacArthur Longitudinal Twin Study MALTS that is by far the most ambitious and comprehensive longitudinal twin study to date The goal of such an in depth study was not to merely provide thorough descriptions of developmental change between the ages of one and three years but to offer an original theoretical framework that explains how change occurs in different domains and how genetics and the environment influence those changes This rigorous study will set the agenda for developmental psychology and behavioral genetics for decades to come

Parental Belief Systems Irving E. Sigel, Ann V. McGillicuddy-DeLisi, Jacqueline J Goodnow, 2014-02-25 Research on the topic of parent beliefs or parent cognition has increased tremendously since the original publication of this volume in 1985 For this revised second edition the editors sought to reflect some of the new directions that research on parent cognition has taken By offering a greater variety of topics it gives evidence of the intellectual concerns that now engage researchers in the field and

testifies to the expanding scope of their interests Although a unique collection because it reflects the diversity that exists among major researchers in the field it evinces a common theme that the ideas parents have regarding their children and themselves as parents have an impact on their actions This emphasis on parents ideas shifts the focus on sources of family influence to ideas or beliefs as determinants of family interactions The implication of this way of thinking for practitioners is that it suggests the shift to ideas and thoughts from behavior and attitudes Advances in the Psychology of Human Intelligence Robert J. Sternberg, 2014-02-25 First published in 1987 Since the 1960s we have witnessed a remarkable resurgence of interest in the psychology of human intelligence In the late 1960s research in the field of intelligence seemed to have gone into at least partial remission But today a large number of investigators are pursuing active research programs concerning human intelligence Advances in the Psychology of Human Intelligence of which this is the fourth volume contains chapters by leaders in the field that document the progress being made toward understanding human intelligence

Children, Schools, And Inequality Doris R Entwisle, 2018-03-05 Educational sociologists have paid relatively little attention to children in middle childhood ages 6 to 12 whereas developmental psychologists have emphasized factors internal to the child much more than the social contexts in explaining children s development Children Schools and Inequality redresses that imbalance It examines elementary school outcomes e g test scores grades retention rates in light of the socioeconomic variation in schools and neighborhoods the organizational patterns across elementary schools and the ways in which family structure intersects with children s school performance Adding data from the Baltimore Beginning School Study to information culled from the fields of sociology child development and education this book suggests why the gap between the school achievement of poor children and those who are better off has been so difficult to close Doris Entwistle Karl Alexander and Linda Olson show why the first grade transition how children negotiate entry into full time schooling is a crucial period They also show that events over that time have repercussions that echo throughout children s entire school careers Currently the only study of this life transition to cover a comprehensive sample and to suggest straightforward remedies for urban schools Children Schools and Inequality can inform educators practitioners and policymakers as well as researchers in the sociology of education and child development

Minority Students in Special and

Gifted Education National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Minority Representation in Special Education, 2002-08-30 Special education and gifted and talented programs were designed for children whose educational needs are not well met in regular classrooms. From their inception, these programs have had disproportionate representation of racial and ethnic minority students. What causes this disproportion? Is it a problem? Minority Students in Special and Gifted Education considers possible contributors to that disparity, including early biological and environmental influences and inequities in opportunities for preschool and K-12 education, as well as the possibilities of bias in the referral and assessment system that leads to placement in special programs. It examines the data on early childhood experience on differences in educational opportunity and on referral and placement. The book also considers whether disproportionate representation should be considered a problem. Do special education programs provide valuable educational services, or do they set students off on a path of lower educational expectations? Would students not now placed in gifted and talented programs benefit from raised expectations, more rigorous classes, and the gifted label, or would they suffer failure in classes for which they are unprepared? By examining this important problem in U.S. education and making recommendations for early intervention and general education, as well as for changes in referral and assessment processes, *Minority Students in Special and Gifted Education* will be an indispensable resource to educators throughout the nation, as well as to policy makers at all levels, from schools and school districts to the state and federal governments.

Developmental Follow-Up Sarah L. Friedman, H. Carl Haywood, 2013-09-11 *Developmental Follow-Up: Concepts, Domains, and Methods* is a compendium of papers that deals with developmental follow-up research, follow-up studies, criterion assessment variables and instruments, as well as analyses of developmental data. The book discusses the historical, theoretical, and methodological considerations in developmental follow-up strategies. Some papers review the history of developmental follow-up research from the early 1920s to the late 1980s, with some insights into future-oriented themes. The book also cites, as an example, the study of the effects of prenatal alcohol exposure on child development. Other papers address health surveillance and child development, including early cognitive development and the contribution of peer interaction. Some papers consider the experimental design and data analysis, such as those concerning planning for follow-up studies that will involve finances, time, and resources, as well as the career impact for the investigator. Another paper reviews the significance of the time when children in the United States received a significant amount of care from someone who was not their mother. The book also discusses the role of the National Institute of Child Health and Human Development, propelled by societal change in a postindustrial age. The text can prove valuable for psychologists, developmental scientists, social workers, and practitioners involved in human behavioral sciences and policy studies.

Advances in the Study of Behavior, 1990-09-18 *Advances in the Study of Behavior* **Origins of Intelligence** Michael Lewis, 2013-06-29 Since the first edition of this volume was published in 1976, interest in the problem of intelligence in general and infant intelligence in particular

has continued to grow The response to the first edition was heartening many readers found it a source of information for the diverse areas of study in infant intelligence Because of the success of that volume we have decided to issue a second edition This edition is in many ways both similar to and different from the first Its similarity lies in the fact that many of the themes and many of the contributors remain the same Its difference can be found in the updating of old chapters and the addition of several new ones Taken together the chapters present a rounded picture of the central issues in infant intelligence Because the aim was to present a picture of the issues no attempt other than the selection of authors and themes can be made to integrate these chapters into a single coherent whole In large part this reflects the diversity of study found in the area of early intellectual behavior Rather than having a comprehensive theory of infant intelligence the field abounds with a series of critical questions To unite these chapters into some coherence it will be necessary to articulate what these issues might be Five major themes run through out the field of infant intelligence and thus through this volume *Influences on Human Development* R.L. Baker, B.R. Mednick, University of California, 2012-12-06 This book is the product of the efforts of a number of people dating back to 1956 when Professor T Kemp then head of the University Institute for Human Genetics in Copenhagen proposed a study on the importance of x ray irradiation in pregnant women Under the guidance of Professors Dyhre Trolle and Preben Plum of the University Hospital in Copenhagen the investigation was expanded to deal with prenatal and perinatal factors of importance for the development of the infant The corpus of medical data that resulted from these efforts was collected and organized by Drs Bengt Zachau Christiansen and Aage Villumsen The project's birth cohort included all deliveries that took place at the State University Hospital Rigshospitalet Copenhagen over a two year period from 1959 to 1961 As part of the perinatal study the mothers and children were subjected to regular and thorough medical examinations during pregnancy and through the first year of the child's life The detailed data from these examinations as well as information about treatment administered were systematically collected and coded The Oxford Handbook of Intellectual Disability and Development Jacob A. Burack, 2012 We know considerably more about persons with intellectual disability than we did even a decade ago Seeking to improve and increase upon this knowledge this book provides a map to continue sophisticated and precise research to inspire professionals involved with intellectual disability and to better the lives of persons affected by it **Psychology and Our Curious World** Wind Goodfriend, Gary W Lewandowski, Gary W.
