Handbook of Historical Sociology Gerard Delanty, Engin F Isin, 2003-06-03 The overall conception of the volume is absolutely splendid and the editors skilfully place the material in the context of disciplinary and post disciplinary developments in sociology This is a major contribution to the field as well as a comprehensive and reliable guide to its main components William Outhwaite Professor of Sociology School of European Studies University of Sussex It is hard to think of anything that has been left out in this masterly survey of contemporary historical sociology The editors have done a superb job in the selection of both themes and contributors We now at last have an up to date book to assign in our graduate courses on comparative historical sociology There s really nothing else like it out there The editors introduction is one of the best things I have read on how the field developed and the problems it has encountered Krishan Kumar William R Kenan Jr Professor of Sociology University of Virginia The range of topics covered and

the number of distinguished scholars who have contributed to the handbook is impressive with leading figures such as Bryan S Turner John R Hall Gianfranco Poggi and Craig Calhoun among the contributors to a book that covers areas as diverse as post colonial historiography and the historical sociology of the city the handbook fills a void within the sizable literature on historical sociology and undoubtedly will be a useful addition to graduate reading lists The British Journal of Sociology What is important in historical sociology What are the main routes of development in the subject This Handbook consists of 26 chapters on historical sociology It is divided into three parts Part One is devoted to Foundations and covers Marx Weber evolutionary and functionalist approaches the Annales School Elias Nelson and Eisenstadt Part Two moves on to consider major approaches such as modernization approaches late Marxist approaches historical geography institutional approaches cultural history intellectual history postcolonial and genealogical approaches The third part is devoted to the major substantive themes in historical sociology ranging from state formation nationalism social movements classes patriarchy architecture religion and moral regulation to problems of periodization and East West divisions Each part includes an introduction that summarizes and contextualizes chapters A general introduction to the volume outlines the current situation of historical sociology after the cultural turn in the social sciences It argues that historical sociology is deeply divided between explanatory sociological approaches and more empirical and interpretative historical approaches Systematic and informative the book offers readers the most complete and authoritative guide to historical sociology

Androids in the Enlightenment Adelheid Voskuhl, 2013-05-31 The eighteenth century saw the creation of a number of remarkable mechanical androids at least ten prominent automata were built between 1735 and 1810 by clockmakers court mechanics and other artisans from France Switzerland Austria and the German lands Designed to perform sophisticated activities such as writing drawing or music making these Enlightenment automata have attracted continuous critical attention from the time they were made to the present often as harbingers of the modern industrial age an era during which human bodies and souls supposedly became mechanized In *Androids in the Enlightenment* Adelheid Voskuhl investigates two such automata both depicting piano playing women These automata not only play music but also move their heads eyes and torsos to mimic a sentimental body technique of the eighteenth century musicians were expected to generate sentiments in themselves while playing then communicate them to the audience through bodily motions Voskuhl argues contrary to much of the subsequent scholarly conversation that these automata were unique masterpieces that illustrated the sentimental culture of a civil society rather than expressions of anxiety about the mechanization of humans by industrial technology She demonstrates that only in a later age of industrial factory production did mechanical androids instill the fear that modern selves and societies had become indistinguishable from machines
