### **Present Status Of Computer Support In Ambulatory Care Lecture Notes In Medical Informatics 3:**

*Present Status of Computer Support in Ambulatory Care* Peter L. Reichertz, Rolf Engelbrecht, Ursula Piccolo, 2013-03-13

The Working Group 5 of the International Medical Informatics Association IMIA dedicates its work to information systems in primary and ambulatory care. The first conference of this Working Group in Hannover in 1980 produced a review of the state of the art of that time and gave perspectives for future development. Rienhoff O and Abrams M E eds *The Computer in the Doctor's Office* Horth Holland Amsterdam 1980. In the meantime a rapid development has taken place. Therefore it seemed appropriate to hold another working conference which was conducted in Munich December 2-6 1985. The goal of this working conference was to review the developments in this field and to critically evaluate the progress achieved so far. The conference addressed general principles in system development and prerequisites for their successful introduction into routine use. Furthermore the topics of expert systems and new technologies were discussed in the context of their usefulness and usability in ambulatory care systems. As before it became very clear that actual computer systems to support ambulatory and/or primary care have to meet the conditions of the health care delivery systems into which they are to be placed.

**Expert Systems and Decision Support in Medicine** Otto Rienhoff, Ursula Piccolo, Berthold Schneider, 2012-12-06. The 33rd Annual Meeting of the German Association for Medical Documentation Informatics and Statistics was combined with a Special Topic Conference of the European Federation for Medical Informatics and takes place at Hannover F.R.G. from September 26 to 29 1988. It was planned and initially prepared by the late Prof P L Reichertz who headed the Hannover institute from 1969 to 1987. To commemorate his contribution to the development of medicine the conference was devoted to him. Peter Reichertz Memorial Conference on Expert Systems and Decision Support in Medicine. Since computers in the early Fifties were first applied to support medical reasoning various phases of euphoria and resignation have followed. Every new methodology which became technically possible was and will be applied to the old question of how to diagnose diseases more reliably. Artificial Intelligence is just one new approach to the old challenge. Over the years some authors have been very optimistic and put forward opinions which motivated the common press to coin the phrase *Dr med computer*. Papers printed under this heading rebuffed the majority of physicians for many years. Today we know that medical decision making is a most complex human performance. And 30 years of research on decision support have given us only limited insight into the underlying processes. Most of the principal methodological questions were already asked very early on.
