Neutrino Physics in Present and Future Kamioka Water-Čerenkov Detectors with Neutron Tagging Pablo Fernández Menéndez, 2018-07-21 This book discusses the upgrade of the Super Kamiokande SK detector which consists in the addition of a salt of gadolinium into the detector's water the goal being to endow it with a very high efficiency ability to detect neutrons the SuperK Gd project This will substantially improve the scientific value of the SK detector because among others neutron production is related to the matter antimatter character of the interacting neutrino In this book the authors develop several procedures for maximizing the impact of neutron tagging in various physics analyses involving a broad range of neutrino energy They thoroughly study the impact of new backgrounds introduced by Gd in key physics analyses most remarkably including the search for the Diffuse Supernova Neutrino Background At GeV energies the neutron tagging improvements are evaluated by performing a complete neutrino oscillation sensitivity study using atmospheric and long baseline neutrinos with a focus on the neutrino mass hierarchy and the leptonic CP violation In order to prove the relevance of neutron tagging with the available data the authors apply the neutron tagging tools developed here to the 4th phase of the SK detector which is already capable of detecting a low fraction of the neutrons produced through hydrogen neutron captures A global oscillation analysis of the SK's atmospheric neutrino data is also conducted **Christian Telescope and Universalist Miscellany**, 1827 **The Publishers Weekly**, 1904 **Astronomical Photometry** Eugene F. Milone, C. Sterken, 2011-04-06 This book will bring together experts in the field of astronomical photometry to discuss how their subfields provide the precision and accuracy in astronomical energy flux measurements that are needed to permit tests of astrophysical theories Differential photometers and photometry improvements in infrared precision the improvements in precision and accuracy of CCD photometry the absolute calibration of flux the development of the Johnson UBVRI photometric system and other passband systems to measure and precisely classify specific types of stars and astrophysical quantities and the current capabilities of spectrophotometry and polarimetry to provide precise and accurate data will all be discussed in this volume The discussion of differential or two star photometers will include those developed for planetary as well as stellar photometry and will range from the Princeton polarizing photometer through the pioneering work of Walraven to the differential photometers designed to measure the ashen light of Venus and to counter the effects of aurorae at high latitude sites the last to be discussed will be the Rapid Alternate Detection System RADS developed at the University of Calgary in the 1980s **Noether Symmetries in Theories of Gravity** Francesco Bajardi, Salvatore Capozziello, 2022-11-24 This volume summarizes the many alternatives and extensions to Einstein's General Theory of Relativity and shows how symmetry principles can be applied to identify physically viable models The first part of the book establishes the foundations of classical field theory providing an introduction to symmetry groups and the Noether theorems A quick overview of general relativity is provided including discussion of its successes and shortcomings then several theories of gravity are presented

and their main features are summarized In the second part the Noether Symmetry Approach is applied to theories of gravity to identify those which contain symmetries In the third part of the book these selected models are tested through comparison with the latest experiments and observations This constrains the free parameters in the selected models to fit the current data demonstrating a useful approach that will allow researchers to construct and constrain modified gravity models for further applications The Scrap Book ,1908 **Advanced Telescope and Instrumentation Control Software** ,2002
