Presidency And Science Advising:

Report of the Miller Center Commission on the Presidency and Science Advising Miller Center Commission on the Presidency and Science Advising, 1989-01 The commission consisting of nine highly placed public officials scientists educators science advisers and science writers looked at science advising as a presidential question rather than one of science policy The core proposition of this report is that the president needs a strong system of science advising which includes a skilled chief science adviser assisted by well qualified staff and with ready access to nongovernmental sources of advice and knowledge Furthermore the commission recommends that a new president consider a spectrum of possible roles for this very flexible staff position and select the roles that best satisfy his needs rather than accept a particular historical model of science advice A major responsibility of a science adviser is to give the president access to the expertise he needs from the science and engineering community inside and outside government Co published with the Miller Center of Public Affairs The Presidency and Science Advising Kenneth W. Thompson, 1991 These essays consider the role of the president's science adviser who that adviser should be the requirements for such an official's success and the adviser's relations to the multiple constituencies served This series explores in depth a long neglected area of presidential research Topics in this volume include New Horizons for Science Advising Science Advising Eisenhower to the Present Science Policy Process What to Do When the Experts Disagree Research Family Practice and the University Science and the Art of Money Science Advising Our Most Urgent Problems Co published with the Miller Center of Public Affairs **Presidential Science**
