and the potential of cellular automata for the simulation of industrial flows also received attention. The papers published in this special issue of Applied Scientific Research provide a fair representation of the Computational Fluid Dynamics topics discussed in the context of their application to petrochemical process equipment.

System Earth via Geodetic-Geophysical Space Techniques Frank M. Flechtner, Thomas Gruber, Andreas Güntner, M. Manda, Markus Rothacher, Tilo Schöne, Jens Wickert, 2010-07-10

Our planet is currently experiencing substantial changes due to natural phenomena and direct or indirect human interactions. Observations from space are the only means to monitor and quantify these changes on a global and long term perspective. Continuous time series of a large set of Earth system parameters are needed in order to better understand the processes causing these changes as well as their interactions. This knowledge is needed to build comprehensive Earth system models used for analysis and prediction of the changing Earth. Geodesy and geophysics contribute to the understanding of system Earth through the observation of global parameter sets in space and time such as tectonic motion, Earth surface deformation, sea level changes and gravity, magnetic and atmospheric fields. In the framework of the German geoscience research and development programme GEOTECHNOLOGIEN, research projects related to the theme 'Observing the Earth System from Space' have been funded within two consecutive phases since 2002, both covering 3 years. The projects address data analysis and model development using the satellite missions CHAMP, GRACE, GOCE and complementary ground or airborne observations. The results of the first phase projects have been published in the Springer book titled 'Observation of the Earth System from Space' edited by Flury, Rummel, Reigber, Rothacher, Boedeker and Schreiber in 2006. The present book titled 'System Earth via Geodetic-Geophysical Space Techniques' summarizes in 40 scientific papers the results of eight coordinated research projects funded in the second phase of this programme, 2005-2008.

Being alive on land N.S. Margaris, Margarita Arianoutsou-Faraggitaki, W.C. Oechel, 2012-12-06

The present volume includes papers presented in the International Symposium on Adaptations to Terrestrial Environment held in Halkidiki, Greece, from September 26th to October 2nd, 1982, as well as some invited ones from well known scientists working in the same field. It seemed rather optimistic to deal just in the same volume with such a variety of organisms: micro organisms to higher plants on the basis of their adaptive strategies for survival on land. It would appear as the entire ecology ought to be included. It was a challenge for us. We undertook this challenge hoping that the output would not be unsuccessful. The Editors allowed the authors of the accepted papers great leeway in terms of thoroughness of their contributions. The quality of the papers included is high while some of them had to be rewritten in order to include valuable comments developed during the Symposium discussions. We have tried to include many papers from Eastern Europe since generally because of the language problem they do not get widely known. The Editors wish to express their thankfulness to UNESCO for sponsoring the Symposium in the frame of Man and Biosphere Program to all scientists who have contributed papers in this volume and to Mrs A. Karamanli Vlahopoulou for her patient and skillful typing of part of the manuscript.
