Pressure Swing Adsorption:

Pressure Swing Adsorption Douglas M. Ruthven, S. Farooq, Kent S. Knaebel, 1996-12-17 Pressure Swing Adsorption is the first book that provides a coherent and concise summary of the underlying science and technology of pressure swing adsorption PSA processes at a level understandable to the practising engineer PSA has achieved widespread commercial acceptance as the technology of choice for hydrogen purification air separation and small scale air driers However PSA has numerous other actual and potential uses such as the recovery of methane from landfill gas the production of carbon dioxide and other large scale applications Since the design and optimization of a PSA process requires a somewhat mathematical model two chapters of the book provide in depth information on equilibrium theory and dynamic numerical simulation However this mathematical material will also help the general reader develop an understanding of the principles and strengths and limitations of various approaches PSA engineers chemical engineers environmental chemists academicians and managers who must make informed decisions about purchasing costly PSA systems will find Pressure Swing Adsorption of particular value Kinetically Controlled Pressure Swing Adsorption (PSA) Guoliang Zhong, 2000 **Modular Simulation of Pressure Swing Adsorption for Hydrogen Purification in Compact Units** Matthias Stegmaier, 2008

Adsorption Equilibria and Performance of a Pressure Swing Adsorption Air Separation Unit George Walter Miller, 1984

Current pressure swing adsorption PSA air separation units operating on short cycle times suffer a reduction in product oxygen concentration when subjected to lower ambient temperatures i.e. less than 10 °C. This work investigates this problem based on analysis of adsorption equilibria, column breakthrough studies and actual PSA system data. Pure and multicomponent data for nitrogen, oxygen and air on molecular sieve 5A were collected at 24, 40 and 70 °C up to pressures of 4–3 atmospheres absolute. Using a statistical thermodynamic model, pure component data were adequately predicted over the entire temperature range 24 to 70 °C. The multicomponent data were predicted at 24 °C by a statistical thermodynamic model and ideal adsorbed solution theory. At the lower temperatures the gas mixture behaved nonideally. *Pressure Changing Steps in Pressure Swing Adsorption* Wai Nyin Ng, 1995 **Oxygen from Air by Pressure Swing Adsorption** P. R. Kayser, 1985 **Pressure Swing and Thermal Swing Adsorption** Capaci, 2013. Pressure Swing Adsorption PSA tests were performed.
