Preventing Automobile Injury New Findings From Evaluation Research:

Preventing Automobile Injury John D. Graham, 1988-09-30 This book relates the emerging interest in injury control to the science of traffic safety. State of the art evaluation research methods are employed to assess the merits of policies designed to prevent automobile related injuries in three problem areas: drunk driving, occupant restraint use, and highway speeding. The authors offer solid recommendations for future scientific and policy directions. A valuable resource for policymakers, legislators, public interest groups, industry specialists, and public health professionals. *Prevention of Motor Vehicle-related Injuries*, 1997

Injury Epidemiology Leon S. Robertson, 1992 This important textbook presents epidemiologic methods for studying injuries and evaluating interventions to prevent them. The formation of research questions and the choice of research methods may reveal or obscure patterns that can lead to remarkable reductions in injury. Injury control programs can be targeted and improved with the help of relatively simple descriptive studies, but some changeable factors are revealed only by more sophisticated analytic methods. The sources for reliable, valid data and exemplary study designs are described in this text. In addition, the difficulties in using rates and ratios and in applying epidemiologic methods when evaluating programs, laws, medical care, and regulations are discussed in detail. The use of economic concepts and policy analysis topics not usually found in epidemiology texts is also covered. Students and health care and safety professionals will find this a valuable guide in studying injury epidemiology and prevention. *Position Papers from the Third National Injury Control Conference*, 1992

Risky Behavior among Youths Jonathan Gruber, 2009-02-15 Every day young people engage in risky behaviors that affect not only their immediate well-being but their long-term health and safety. These well-honed essays apply diverse economic analyses to a wide range of unsafe activities, including teen drinking and driving, smoking, drug use, unprotected sex, and criminal activity. Economic principles are further applied to mental health and performance issues such as teenage depression, suicide, nutritional disorders, and high school dropout rates. Together, the essays yield notable findings: price and regulatory incentives are critical determinants of high-risk behavior, suggesting that youths do apply some sort of cost-benefit calculation when making decisions; the macroeconomic environment in which those decisions are made matters greatly; and youths who pursue high-risk behaviors are significantly more likely to engage in similar behaviors as adults. This important volume provides both a key data source for public policy makers and a clear affirmation of the usefulness of economic analysis to our understanding of risky behavior.

Traffic Safety and the Driver Leonard Evans, 1991 Examines deaths, injuries, and property damage from traffic crashes. Evans, research scientist, General Motors Research Labs, Warren, Michigan, applies the methods of science to illuminate the characteristics of these problems, their origin, and nature, as well as their severity.
