Prevention Of Myocardial Infarction:

Prevention of Myocardial Infarction JoAnn E. Manson, 1996 Coronary heart disease remains the leading cause of death in both men and women in most industrialized countries Yet it is largely preventable and health care providers can acquire the skills to help their patients reduce their risks substantially Traditional risk factors such as cigarette smoking hypercholesterolemia hypertension sedentary lifestyle obesity and glucose intolerance explain a major proportion of coronary events Recent evidence also suggests important adjunctive roles for hormone replacement therapy in postmenopausal women and aspirin prophylaxis in individuals at high risk of a first myocardial infarction Emerging evidence indicates an important role for diet in the prevention of heart disease Although the importance of lifestyle and behavioral modifications may well be known among physicians and other health care providers the implementation of this knowledge has been limited One reason is that the information supporting the value feasibility and cost effectiveness of risk reduction strategies has not been previously synthesized and made widely available to health care providers in office and community settings *Prevention of Myocardial Infarction* fills these critical gaps by providing a state of the art compendium of the scientific evidence on the efficacy of coronary disease prevention while focusing on helping clinicians develop intervention skills to utilize available knowledge Chapters by leading authorities in cardiovascular epidemiology clinical cardiology cost effectiveness analysis and public health translate the theory of preventive cardiology into feasible implementation The counseling and other intervention strategies described in this textbook have documented clinical efficacy and cost effectiveness and they require little time to learn or implement The book is written mainly for primary care providers including general internists and family physicians but will also be of interest to medical subspecialties such as cardiologists and endocrinologists as well as medical students dietitians psychologists epidemiologists and students practitioners and researchers in public health

Secondary Prevention in Coronary Artery Disease and Myocardial Infarction P. Mathes, 2012-12-06 Despite considerable effort in primary prevention coronary heart disease continues to be the leading cause of death in the industrialized nations The patient who survives his first myocardial infarction carries approximately a tenfold risk of recurrence and sudden death when compared to the normal population The concept of secondary prevention therefore has emerged as an active strategy aimed at the reduction of fatal and non fatal recurrences of myocardial infarction Apart from risk factors of relevance in primary prevention secondary prevention is dependent on the extent of the disease itself in other words the number of vessels involved the extent of myocardial damage and the degree of electrical instability Nonmedical aspects such as the level of education the degree of social support and the attitude towards stress also appear to influence the prognosis The aim of this volume is to bring together all those factors relevant to achieving the maximal life span in patients afflicted with a disease that by its very nature is a lifelong process However as the late Paul Dudley White stated appropriately more than 40 years ago it is not sufficient merely to add years to a life one should also add life to the years This concept truly is the nucleus of

secondary prevention since only a life worth living generates the motivation needed to take all the steps necessary in secondary prevention. The authors and the editor are most grateful to Pharma Schwarz Inc.

Heart-Brain Interactions Giuseppe Di Pasquale, Giuseppe Pinelli, 2012-12-06 In the last decade, there has been a growing interest in the study of the interactions between the heart and the brain, especially in the field of cerebral ischemia. The interactions between cardiovascular and cerebrovascular diseases are of relevance not only for research investigation but also for clinical implications in the daily clinical practice. A wealth of information has been gathered, particularly on three topics: cardiovascular consequences of

cerebral injuries cardioembolic stroke and association of carotid and coronary artery disease The available information however is still sparse and fragmentary mainly because of the lack of communication between neurologists and cardiologists With the aim of improving communication between several disciplines and technologies we started to organize since 1987 in Bologna Italy an international Symposium on heart brain interactions to be held every 3 years Our intention was to gather prominent clinicians and researchers from outstanding cardiologic and neuro logic institutions actively involved in the study of heart brain interactions The ambitious goal has been to fit different pieces of information like in a puzzle This book originates from the contributions presented at the 2nd Symposium which was held in Bologna on November 30 December 1 1990 The book is subdivided into three sections I cardiovascular consequences of cerebral damage II cardiogenic cerebral ischemia III cerebrovascular and coronary artery disease The Practice of Coronary Disease Prevention Michael Miller, Robert A. Vogel, 1996 Dramatic improvements have been made in the course of high risk cardiac patients following the aggressive modification of coronary risk factors This text provides information on the recent rapid advances made in the prevention of cardiovascular disease The Secondary Prevention of Myocardial Infarction Andrew D.
