Prevention of Progression in Chronic Liver Disease N. Hiyashi, M.P. Manns, Marianne Manns, Nariyuki Hayashi, 2004-07-21 In several liver diseases the underlying cause cannot always be eliminated i.e. the progression of liver disease cannot be prevented This is particularly true for non responders to the treatment of chronic hepatitis C HCV It is relevant for more than 40% of patients with HCV genotype 1 and up to 20% of patients with genotype 2 or 3 Several approaches are now underway to prevent or ameliorate mechanisms of disease progression In Asia and particularly in Japan Glycyrrhizine SNMC has been widely used for this purpose At present SNMC is under clinical evaluation in Europe This book the proceedings of the Falk Workshop on Prevention of Progression in Chronic Liver Disease An Update on SNMC Stronger Neo Minophagen C Part IV of the XII Falk Liver Week in honour of Hans Popper's 100th birthday held in Freiburg Germany on 22 October 2003 is devoted to the understanding of basic mechanisms of fibrogenesis the state of the art of non invasive markers of disease progression that may substitute liver biopsy in the future and of other predictive parameters indicating disease progression in particular the development of hepatocellular carcinoma All these problems are particularly relevant for chronic hepatitis C A better characterization of so called non responders for the treatments available is crucial for the development of new strategies preventing or postponing disease progression Such strategies should influence fibrogenesis and thus cirrhosis formation as well as the development of life threatening complications of liver cirrhosis including hepatocellular carcinoma In this volume the available information on SNMC as an approach to prevent progression of chronic liver disease is discussed by several internationally renowned authors who report on the mechanisms of liver fibrogenesis and fibrolysis on non invasive markers of disease progression and on hepatocellular carcinoma as one of the major complications of liver cirrhosis nowadays Finally experts from Japan report on their knowledge and experience concerning the drug SNMC Glycyrrhizine in the prevention of cirrhosis and HCC and first study results from Europe are presented
